[Bioinformatics, Supercomputing and Complex Genome Analysis](#) Aug 10 2020 Since the beginning of the genome project, the necessary involvement of scientists of widely divergent backgrounds has been evident. The proper handling, analysis, dissemination of information, and the control and data gathering of automated process are areas where computers are directly involved. Thus computers are intimately tied into the production and analysis of biological data. However, many challenges lie ahead. This volume is a collection of selected oral and poster presentations given at The Second International Conference on Bioinformatics, Supercomputing and Complex Genome Analysis, organized to address some of these challenges. The topics include the current status and future prospects of genome map, mapping and sequencing, complex genome analysis, linguistic and neural network approaches, database issues, and computer tools in the genome project. The volume will be ideal for students, newcomers, young researchers and experts alike, who are computationally or experimentally oriented. Keynote Speakers: C L Smith, D Grothues, T Ito, T Sano, D Wang, Y-W Zhu, C R Canton & R J Rohins. Contents: The conference consisted of several topical areas and more than fifty talks. The topics covered are: Linguistic Approaches Mapping and Sequencing I Genome Map Mapping & Sequencing II Databases Applications of Neural-Net Genome Sequence Analysis Readership: Biochemists, biologists, computational scientists, geneticists and mathematicians.

Political Knowledge in the Czech Republic Jul 01 2022 The book examines the origins, nature, and impact of different facets of political knowledge in the Czech Republic between 1967 and 2014. The central argument presented in this book is that evaluating citizens on the basis of objective, or factual, knowledge alone makes little sense. What citizens know about politics comes from a variety of sources that are complementary. This is the first detailed study of how much Czechs know about politics, and why it matters. Here are some of the key findings of this book. There are many forms of political knowledge. Citizens make decisions using different forms of political knowledge. Czechs knowledge of politics has remained constant over time. How people answer knowledge questions in surveys matters. Political knowledge is shaped by personality traits. Factual knowledge is linked with forecasting social change, but is not always linked with making correct voting. Experts with high levels of knowledge do not agree on what is a correct answer.

Structural Health Monitoring 2013: A Roadmap to Intelligent Structures Nov 24 2021 Original research on SHM sensors, quantification strategies, system integration and control for a wide range of engineered materials New applications in robotics, machinery, as well as military aircraft, railroads, highways, bridges, pipelines, stadiums, tunnels, space exploration and energy production Continuing a critical book series on structural health monitoring (SHM), this two-volume set (with full-text searchable CD-ROM) offers, as its subtitle implies, a guide to greater integration and control of SHM systems. Specifically, the volumes contain new research that will enable readers to more efficiently link sensor detection, diagnostics/quantification, overall system functionality, and automated, e.g., robotic, control, thus further closing the loop from inherent signal-based damage detection to responsive real-time maintenance and repair. SHM performance is demonstrated in monitoring the behavior of composites, metals, concrete, polymers and selected nanomaterials in a wide array of surroundings, including harsh environments, under extreme (e.g., seismic) loading and in space. New information on smart sensors and network optimization is enhanced by novel statistical and model-based methods for signal processing and data quantification. A special feature of the book is its explanation of emerging control technologies. Research in these volumes was initially presented in September 2013 at the 9th International Workshop on Structural Health Monitoring (IWSHM), held at Stanford University and sponsored by the Air Force Office of Scientific Research, the Army Research Laboratory, and the Office of Naval Research.

Bioavailability, Bioaccessibility and Mobility of Environmental Contaminants Dec 02 2019 This book covers all aspects of bioavailability, as related to environmental contaminants. After a discussion of the definition of bioavailability and its context, focus is placed on the role of risk assessment and bioavailability. Methods of analysis are then discussed including a range of atomic spectroscopic and electrochemical techniques for metal analysis and chromatographic approaches for persistent organic pollutants (POPs). The occurrence, properties and eco-toxicity of POPs and metals in the soil/sediment environment are discussed. Particular emphasis is placed on the uptake of POPs and metals by plants (phytoextraction). Examples of POPs and metals in the environment are reviewed. Methods to assess the bioavailability of POPs and metals in the environment are discussed. The particular approaches considered are: non-exhaustive extraction techniques single extraction techniques sequential extraction techniques use of cyclodextrin and surfactants in-vitro gastrointestinal methods including physiological-based extraction test the use of bioassays including earthworms. Finally, selected case studies highlight the importance of determining the bioavailability of POPs and metals.
