A Companion to Ancient Agriculture Mar 19 2022 The first book-length overview of agricultural development in the ancient world A Companion to Ancient Agriculture is an authoritative overview of the history and development of agriculture in the ancient world. Focusing primarily on the Near East and Mediterranean regions, this unique text explores the cultivation of the soil and rearing of animals through centuries of human civilization—from the Neolithic beginnings of agriculture to Late Antiquity. Chapters written by the leading scholars in their fields present a multidisciplinary examination of the agricultural methods and influences that have enabled humans to survive and prosper. Consisting of thirty-one chapters, the Companion presents essays on a range of topics that include economic-political, anthropological, zooarchaeological, ethnobotanical, and archaeobotanical investigation of ancient agriculture. Chronologically-organized chapters offer in-depth discussions of agriculture in Bronze Age Egypt and Mesopotamia, Hellenistic Greece and Imperial Rome, Iran and Central Asia, and other regions. Sections on comparative agricultural history discuss agriculture in the Indian subcontinent and prehistoric China while an insightful concluding section helps readers understand ancient agriculture from a modern perspective. Fills the need for a full-length biophysical and social overview of ancient agriculture Provides clear accounts of the current state of research written by experts in their respective areas Places ancient Mediterranean agriculture in conversation with contemporary practice in Eastern and Southern Asia Includes coverage of analysis of stable isotopes in ancient agricultural cultivation Offers plentiful illustrations, references, case studies, and further reading suggestions A Companion to Ancient Agriculture is a much-needed resource for advanced students, instructors, scholars, and researchers in fields such as agricultural history, ancient economics, and in broader disciplines including classics, archaeology, and ancient history.

Biostimulants for Crop Production and Sustainable Agriculture May 29 2020 Agricultural biostimulants are a group of substances or microorganisms, based on natural resources, that are applied to plants or soils to improve nutrient uptake and plant growth, and provide better tolerance to various stresses. Their function is to stimulate the natural processes of plants, or to enrich the soil microbiome to improve plant growth, nutrition, abiotic and/or biotic stress tolerance, yield and quality of crop plants. Interest in plant biostimulants has been on the rise over the past 10 years, driven by the growing interest of researchers and farmers in environmentally-friendly tools for improved crop performance. Improved crop production technologies are urgently needed to meet the growing demand for food for the ever-increasing global population by addressing the impacts of changing climate on agriculture. This book is of interest to researchers in agriculture, agronomy, crop and plant science, soil science and environmental science.

The Industrial Revolution Jan 05 2021 This is an introduction to the Industrial Revolution which offers an integrated account of the economic and social aspects of change during the period. Recent revisionist thinking has implied that fundamental change in economic, social and political life at the time of the Industrial Revolution was minimal or non-existent. The author challenges this interpretation, arguing that the process of revision has gone too far; emphasizing continuity at the expense of change and neglecting many historically unique features of the economy and society. Elements given short shrift in many current interpretations are reassigned their central roles.

Agricultural Enlightenment Jul 11 2021 Agricultural Enlightenment explores the modernization of the rural economy in Europe through the lens of the Enlightenment. It focuses on the second half of the eighteenth century and emphasizes the role of useful knowledge in the process of agrarian change and agricultural development. As such it invites economic historians to respond to the challenge issued by Joel Mokyr to look beyond quantitative data and to take seriously the argument that cultural factors, broadly understood, may have aided or hindered the evolution of agriculture in the early modern period (what people knew and believed had a direct bearing on their economic behavior [Mokyr, The Enlightened Economy]). Evidence in support of the idea that a readily accessible supply of agricultural knowledge helps to explain the trajectory of the rural economy is drawn from all of the countries of Europe. The book includes two cases studies of rapid rural modernization in Scotland and Denmark where Agricultural Enlightenment was swiftly followed by full-scale Agricultural Revolution.

Saving Capitalism from the Capitalists Oct 22 2019 Capitalism is often recognised as a realisation of the bourgeois revolution—war to the castles and peace to the huts. This book argues that a lack in perception of the progressive aspects of capitalism has resulted in policy measures that have frequently been defeated. It brings out the importance of capitalism as the promise of being able to attain socialism. Based on modern economics of a post-Keynesian nature, it rejects mechanistic Marxism and the civilisational process of cultural turn thinking. The book is a comprehensive analysis of the origins of capitalism, its contradictions, the dynamics of non-capitalist societies and the challenges of globalisation (including theories of imperialism).

Smart Farming Technologies for Sustainable Agricultural Development Mar 27 2020 In order to meet food needs, farmers need to integrate the latest technologies enabling them to make more informed decisions. Smart Farming Technologies for Sustainable Agricultural Development provides innovative insights into the latest farming advancements in terms of informatics and communication. The content within this publication represents the work of topics such as sensor systems, wireless communication, and the integration of the Internet of Things in agriculture-related processes. It is a vital reference source for farmers, academicians, researchers, government agencies, technology developers, and graduate-level students seeking current research on smart farming technologies.

Successes in African Agriculture Jun 17 2019 Sub-Saharan Africa is one of the poorest regions of the world. Because most Africans work in agriculture, escaping such dire poverty depends on increased agricultural productivity to raise rural incomes, lower food prices, and stimulate growth in other economic sectors. Per capita agricultural production in sub-Saharan Africa has fallen, however, for much of the past half-century. Successes in African Agriculture investigates how to reverse this decline. Instead of cataloging failures, as many past studies have done, this book identifies episodes of successful agricultural growth in Africa and identifies processes, practices, and policies for accelerated growth in the future. The individual studies follow developments in, among other areas, the farming of maize in East and Southern Africa, cassava across the middle belt of Africa, cotton in West Africa, horticulture in Kenya, and dairying in East Africa. Drawing on these case studies and on consultations with agricultural specialists and politicians from across sub-Saharan Africa -- undertaken in collaboration with the African Union's New Partnership for Africa's Development -- the contributors identify two key determinants of positive agricultural performance: agricultural research to provide more productive and sustainable technologies to farmers and a policy framework that fosters market incentives for increasing

production. The contributors discuss how the public and private sectors can best coordinate the convergence of both factors. Given current concerns about global food security, this book provides timely and important resources to policymakers and development specialists concerned with reversing the negative trends in food insecurity and poverty in Africa.

American Agriculture in the Twentieth Century Apr 20 2022 "Gardner documents both the economic difficulties that have confronted farmers and the technological and economic transformations that have lifted them from relative poverty to economic parity with the nonfarm population. He provides a detailed analysis of the causes behind these trends, with emphasis on the role of government action"--Jacket.

A History of World Agriculture Sep 25 2022 Only once we understand the long history of human efforts to draw sustenance from the land can we grasp the nature of the crisis that faces humankind today, as hundreds of millions of people are faced with famine or flight from the land. From Neolithic times through the earliest civilizations of the ancient Near East, in savannahs, river valleys and the terraces created by the Incas in the Andean mountains, an increasing range of agricultural techniques have developed in response to very different conditions. These developments are recounted in this book, with detailed attention to the ways in which plants, animals, soil, climate, and society have interacted. Mazoyer and Roudart's *A History of World Agriculture* is a path-breaking and panoramic work, beginning with the emergence of agriculture after thousands of years in which human societies had depended on hunting and gathering, showing how agricultural techniques developed in the different regions of the world, and how this extraordinary wealth of knowledge, tradition and natural variety is endangered today by global capitalism, as it forces the unequal agrarian heritages of the world to conform to the norms of profit. During the twentieth century, mechanization, motorization and specialization have brought to a halt the pattern of cultural and environmental responses that characterized the global history of agriculture until then. Today a small number of corporations have the capacity to impose the farming methods on the planet that they find most profitable. Mazoyer and Roudart propose an alternative global strategy that can safeguard the economies of the poor countries, reinvigorate the global economy, and create a livable future for mankind.

Irrigated Agriculture in Egypt Oct 02 2020 This book targets the issue of water scarcity in Egypt as a typical example of the world water crisis. Today, the available water resource is facing its limit because of rapid increase in water demand as a result of population growth and changes in peoples' life-style. The basic idea to solve the problem of water scarcity is that the irrigation sector, the biggest user of water, should increase water use efficiency. However, the real problem is how this can be achieved in view of the crucial need for water in this sector. This book addresses this challenge through case studies from the Nile delta in Egypt. The water problem in the Nile delta, the major source for water in Egypt, is discussed in this book from all its various aspects. This book covers the situation before and after the advent of the Aswan High Dam, so that the reader understands the entire development. Another special feature are the extensive and scientific descriptions of contemporary topics in water and agriculture, especially from the viewpoint of water saving and sustainability. These descriptions are based on field experiments and surveys in a six-year international research project. Topics of this book are local, but their implications are global.

New Perspectives on the History of Life Sciences and Agriculture Aug 24 2022 This volume explores problems in the history of science at the intersection of life sciences and agriculture, from the mid-eighteenth to the mid-twentieth century. Taking a comparative national perspective, the book examines agricultural practices in a broad sense, including the practices and disciplines devoted to land management, forestry, soil science, and the improvement and management of crops and livestock. The life sciences considered include genetics, microbiology, ecology, entomology, forestry, and deal with US, European, Russian, Japanese, Indonesian, Chinese contexts. The book shows that the investigation of the border zone of life sciences and agriculture raises many interesting questions about how science develops. In particular it challenges one to re-examine and take seriously the intimate connection between scientific development and the practical goals of managing and improving – perhaps even recreating – the living world to serve human ends. Without close attention to this zone it is not possible to understand the emergence of new disciplines and transformation of old disciplines, to evaluate the role and impact of such major figures of science as Humboldt and Mendel, or to appreciate how much of the history of modern biology has been driven by national ambitions and imperialist expansion in competition with rival nations.
