In the continuing push toward  
optical computing, the focus  
remains on finding and  
developing the right materials.  
Characterizing materials,  
understanding the behavior of  
light in these materials, and  
being able to control the light  
are key players in the search  
for suitable optical materials.  
Optics in Magnetic Multilayers

optics in anisotropic magnetic media. While most of the literature presents only final results of the complicated formulae for the optics in anisotropic media, this book provides detailed explanations and full step-by-step derivations that offer insight into the procedure and reveal any approximations. Based on more than three decades of experimental research on the subject, the author explains the basic concepts of magneto-optics; nonreciprocal wave propagation; the simultaneous effect of crystalline symmetry and arbitrarily oriented magnetization on the form of permittivity tensors; spectral

dependence of permittivity; multilayers at polar, longitudinal, transverse, and arbitrary magnetization; the effect of normal or near-normal incidence on multilayers; and anisotropic multilayer gratings. Making the subject of magneto-optics and anisotropic media approachable by the nonspecialist, *Optics in Magnetic Multilayers and Nanostructures* serves as an ideal introduction to newcomers and an indispensable reference for seasoned researchers.

**Computer Vision and Graphics** Jul 26 2022 This book constitutes the refereed proceedings of the International Conference on

Computer Vision and Graphics, ICCVG 2016, held in Warsaw, Poland, in September 2016. The 68 full papers presented were carefully reviewed and selected from various submissions. They show various opportunities for valuable research at the border of applied information sciences, agribusiness, veterinary medicine and the broadly understood domains of biology and economy.
