Teaching and Learning Discrete Mathematics Worldwide: Curriculum and Research Aug 19 2019 This book discusses examples of discrete mathematics in school curricula, including in the areas of graph theory, recursion and discrete dynamical systems, combinatorics, logic, game theory, and the mathematics of fairness. In addition, it describes current discrete mathematics curriculum initiatives in several countries, and presents ongoing research, especially in the areas of combinatorial reasoning and the affective dimension of learning discrete mathematics. Discrete mathematics is the math of our time.' So declared the immediate past president of the National Council of Teachers of Mathematics, John Dossey, in 1991. Nearly 30 years later that statement is still true, although the news has not yet fully reached school mathematics curricula. Nevertheless, much valuable work has been done, and continues to be done. This volume reports on some of that work. It provides a glimpse of the state of the art in learning and teaching discrete mathematics around the world, and it makes the case once again that discrete mathematics is indeed mathematics for our time, even more so today in our digital age, and it should be included in the core curricula of all countries for all students.

Indicators and Instruments in the Context of Inquiry-Based Science Education Oct 21 2019 This report documents indicators and instruments in the context of inquiry-based science education (IBSE). It is embedded in a project that aims at disseminating inquiry-based science teaching on a large scale across Europe. Recent research about IBSE is rather specific to individual research questions and focuses on single aspects of IBSE. Furthermore, the instruments and indicators underlying the different studies are predominately not systematically covered. In this report single indicators and instruments in the context of science education are brought together. Thereby a coherent database and a link to different research results are presented. The indicators and instruments in this report originate from a systematic literature review about IBSE from 2005-2009. To receive a comprehensive picture about research on IBSE the scope of this review contains instructional aspects (1), implementation areas of politics/stakeholders (2) and teacher education and teacher professional development (3). This report contributes to supplying a systematic overview about instruments and indicators in the field of IBSE. It addresses researchers, politicians and stakeholders, teacher educators and teachers who are interested in methods of research and dissemination in the context of science education and IBSE.
