Applied Nonparametric Regression Dec 24 2021 This is the first book to bring together in one place the techniques for regression curve smoothing involving more than one variable.

Emerging Issues and Methods in Personality Assessment May 29 2022 This book constitutes a collection of articles that were written for, and recently published as, special sections in three consecutive issues of the Journal of Personality Assessment. Part I provides lucid commentaries on the current status of and future issues regarding the Rorschach and MMPI-2 and other instruments, including the Minnesota Multiphasic Personality Inventory -- Adolescent (MMPI-A), the Interpersonal Adjective Scales (IAS-R), the Inventory of Interpersonal Problems -- Circumplex version (IIP-C), the revised NEO Personality Inventory (NEO-PI-R), and the third edition of the Millon Clinical Multiaxial Inventory (MCMI-III). The authors not only participated in the dvelopment of the instruments, but continue to lead the research effort in their application in both clinical and research settings. Part II addresses several issues that have been recurring themes, and often topics of debate, in the research and professional literature. The contributors discuss the impact of the five-factor model on personality assessment, the issue of deception in personality assessment, and various

critical issues in the measurement of mood states. Other articles focus on the integration of the MMPI-2 and Rorschach and the process that clinicians should follow when applying scientific knowledge to clinical practice. Part III is primarily devoted to overviews of several statistical methods that are employed infrequently in personality assessment research, but have great potential in contributing to the understanding of the complex data sets often encountered in the measurement and study of personality. These articles serve as both an introduction and a brief tutorial for personality researchers who are unfamiliar with the subject matter. They are valuable references that will form the basis for evaluating the appropriate use of these methods in published research in their areas of interest.

Computational and Information Science Jul 27 2019 The 2004 International Symposium on Computational and Information Sciences (CIS 2004) aimed at bringing researchers in the area of computational and - formation sciences together to exchange new ideas and to explore new ground. The goal of the conference was to push the application of modern computing technologies to science, engineering, and information technologies to a new level of sophistication and understanding. Theinitialideatoorganizesuchaconferencewithafocusoncomputationand applicationswasoriginatedbyDr. JunZhang,duringhisvisittoChina inAugust 2003, in consultation with a few friends, including Dr. Jing Liu at the Chinese Academy of Sciences, Dr. Jun-Hai Yong at Tsinghua University, Dr. Geng Yang at Nanjing University of Posts and Communications, and a few others. After severaldiscussionswithDr.Ji-HuanHe,itwasdecidedthatDonghuaUniversity would host CIS 2004. CIS 2004 attempted to distinguish itself from other conferences in its - phasis on

participation rather than publication. A submitted paper was only reviewed with the explicit understanding that, if accepted, at least one of the authors would attend and present the paper at the conference. It is our - lief that attending conferences is an important part of one's academic career, through which academic networks can be built that may bene?t one's academic life in the long run. We also made every e?ort to support graduate students in attending CIS 2004. In addition to set reduced registration fees for full-time graduate students, we awarded up to three prizes for to the Best Student Papers at CIS 2004. Students whose

papers were selected for awards were given cash prizes, plus a waiver of registration fees.

Latent Trait and Latent Class Models Feb 23 2022 This volume is based on an international conference held at the Institute for Science Education (IPN) in Kiel in August 1985. The IPN is a national research institute for science education of the Federal Republic of Germany associated with the University of Kiel. The aim of this conference-to treat latent trait and latent class models under comparative points of view as well as under application aspects-was realized in many stimulating contributions and

very different ways. We asked the authors of these papers to work out their contributions for publication here, not only because many of the papers present new material, but also because the time is ripe for a comprehen sive volume, working up the widespread literature of the past ten years in this field. We have tried to compile a volume that will be of interest to statistically oriented researchers in a variety of disciplines, including psychology, sociology, education, political science, epidemiology, and the like. Although the chapters assume a reasonably high level of methodo logical sophistication, we hope that the book will find

its way into advanced courses in the above fields. We are grateful to the IPN for organizing the conference, to our contributors for their untiring efforts in revising their chapters for publication, and to the staff of Plenum Publishing Corporation for helping to make this book a reality.

Stochastic Processes for Insurance and Finance Aug 08 2020 Stochastic Processes for Insurance and Finance offers a thorough yet accessible reference for researchers and practitioners of insurance mathematics. Building on recent and rapid developments in applied probability, the authors describe in general terms models based on Markov processes, martingales and various types of point processes. Discussing frequently asked insurance questions, the authors present a coherent overview of the subject and specifically address: The principal concepts from insurance and finance Practical examples with real life data Numerical and algorithmic procedures essential for modern insurance practices Assuming competence in probability calculus, this book will provide a fairly rigorous treatment of insurance risk theory recommended for researchers and students interested in applied probability as well as practitioners of actuarial sciences. Wiley Series in Probability and Statistics *Simulation in Computational Finance and Economics: Tools and Emerging Applications* Jul 07 2020 Simulation has become a tool difficult to substitute in many scientific areas like manufacturing, medicine, telecommunications, games, etc. Finance is one of such areas where simulation is a commonly used tool; for example, we can find Monte Carlo simulation in many

financial applications like market risk analysis, portfolio optimization, credit risk related applications, etc. Simulation in Computational Finance and Economics: Tools and Emerging Applications presents a thorough collection of works, covering several rich and highly productive areas of research including Risk Management, Agent-Based Simulation, and Payment Methods and Systems, topics that have found new motivations after the strong recession experienced in the last few years. Despite the fact that simulation is widely accepted as a prominent tool, dealing with a simulation-based project requires specific management abilities of the researchers. Economic researchers will find an excellent reference to introduce them to the computational simulation models. The works presented in this book can be used as an inspiration for economic researchers interested in creating their own computational models in their respective fields.

Creativity in the Classroom Aug 20 2021 Now in its seventh edition, Creativity in the Classroom helps teachers link creativity research and theory to the everyday activities of classroom teaching. Ideal reading for any course dealing wholly or partially with creativity and teaching, this foundational textbook covers definitions, research, and theory in the first half, and reflects on classroom practices in the second. Thoroughly revised and updated, the seventh edition features new research on neuroscience and creativity in specific disciplines; new sections on social-emotional learning, teaching engineering, and leadership; and an entire new chapter on building creativity at the school or district level.
Izvestiya Aug 27 2019
Handbook Of Texture Analysis Sep 01 2022 Texture analysis is one of the fundamental aspects of human vision by which we

discriminate between surfaces and objects. In a similar manner, computer vision can take advantage of the cues provided by surface texture to distinguish and recognize objects. In computer vision, texture analysis may be used alone or in combination with other sensed features (e.g. color, shape, or motion) to perform the task of recognition. Either way, it is a feature of paramount importance and boasts a tremendous body of work in terms of both research and applications.Currently, the main approaches to texture analysis must be sought out through a variety of research papers. This collection of chapters brings together in one handy volume the major topics of importance, and categorizes the various techniques into comprehensible concepts. The methods covered will not only be relevant to those working in computer vision, but will also be of benefit to the computer graphics, psychophysics, and pattern recognition communities, academic or industrial./a

Pattern Recognition in Bioinformatics Jan 13 2021 In the post-genomic era, a holistic understanding of biological systems and p-cesses,inalltheircomplexity,is criticalincomprehendingnature'schoreography of life. As a result, bioinformatics involving its two main disciplines, namely, the life sciences and the computational sciences, is fast becoming a very promising multidisciplinary research ?eld. With the ever-increasing application of lar- scalehigh-throughputtechnologies,suchas geneorproteinmicroarraysandmass spectrometry methods, the enormous body of information is growing rapidly. Bioinformaticians are posed with a large number of di?cult problems to solve, arising not only due to the complexities in acquiring the molecular infor-tion but also due to the size and nature of the generated data sets and/or the limitations of the algorithms required for analyzing these data. Although the ?eld of bioinformatics is

still in its embryonic stage, the recent advancements in computational and information-theoretic techniques are enabling us to c-ductvariousinsilicotestingandscreeningofmanylab-basedexperimentsbefore these are actually performed in vitro or in vivo. These in silico investigations are providing new insights for interpretation and establishing a new direction for a deeper understanding. Among the various advanced computational methods currently being applied to such studies, the pattern recognition techniques are mostly found to be at the core of the whole discovery process for apprehending the underlying biological knowledge. Thus, we can safely surmise that the -going bioinformatics revolution may, in future, inevitably play a major role in many aspects of medical practice and/or the discipline of life sciences.

Advanced Concepts for Intelligent Vision Systems
Jan 01 2020 This book constitutes the refereed proceedings of the 17th International Conference on Advanced Concepts for Intelligent Vision Systems, ACIVS 2016, held in Lecce, Italy, in October 2016. The 64 revised full papers presented in this volume were carefully selected from 137 submissions. They deal with classical low-level image processing techniques; image and video compression; 3D; security and forensics; and evaluation methodologies.

British Destroyers: J-C and Battle Classes Nov 03 2022 "A terrific author . . . invaluable to the modeler wishing to reproduce these classes of destroyers, and also to those interested in naval history."—IPMS Magazine The ShipCraft series provides in-depth information about building and modifying model kits of famous warship types. Lavishly illustrated, each book takes the modeler through a brief history of the subject class, highlighting differences between sisterships and

changes in their appearance over their careers. This includes paint schemes and camouflage, featuring color profiles and highly detailed line drawings and scale plans. The modeling section reviews the strengths and weaknesses of available kits, lists commercial accessory sets for super-detailing of the ships, and provides hints on modifying and improving the basic kit. This is followed by an extensive photographic survey of selected high-quality models in a variety of scales, and the book concludes with a section on research references—books, monographs, large-scale plans and relevant websites. A follow-up to ShipCraft 11 on inter-war destroyers, this new volume deals with the later classes which were the most modern British destroyers of the Second World War. Marked by a common single-funneled silhouette, they were actually very varied, ranging from the large and powerful J to N flotillas, via the austere "War Emergency" classes that were built in large numbers, to the radically different "Battle" class, designed with a powerful AA armament for service in the Pacific. "This book will be of interest to those who want an easy reference book that covers the British and Australian destroyers of this period, especially with regard to camouflage and overall appearance in service."—Australian Naval Institute

The MMPI: Clinical Assessment and Automated Interpretation Mar 15 2021
Stratification Jun 05 2020 This book offers an exciting new perspective on differentiation and inequality, looking at how our most personal choices (of sexual partners, friends, consumption items and lifestyle) are influenced by hierarchy and social difference.
Atmospheric and Oceanic Fluid Dynamics Mar 27 2022 Fluid dynamics is fundamental to our understanding of the atmosphere and oceans. Although many of the same

principles of fluid dynamics apply to both the atmosphere and oceans, textbooks tend to concentrate on the atmosphere, the ocean, or the theory of geophysical fluid dynamics (GFD). This textbook provides a comprehensive unified treatment of atmospheric and oceanic fluid dynamics. The book introduces the fundamentals of geophysical fluid dynamics, including rotation and stratification, vorticity and potential vorticity, and scaling and approximations. It discusses baroclinic and barotropic instabilities, wave-mean flow interactions and turbulence, and the general circulation of the atmosphere and ocean. Student problems and exercises are included at the end of each chapter. Atmospheric and Oceanic Fluid Dynamics: Fundamentals and Large-Scale Circulation will be an invaluable graduate textbook on advanced courses in GFD, meteorology, atmospheric science and oceanography, and an excellent review volume for researchers. Additional resources are available at www.cambridge.org/9780521849692.

Financial Risk Management
May 17 2021 A global banking risk management guide geared toward the practitioner Financial Risk Management presents an in-depth look at banking risk on a global scale, including comprehensive examination of the U.S. Comprehensive Capital Analysis and Review, and the European Banking Authority stress tests. Written by the leaders of global banking risk products and management at SAS, this book provides the most up-to-date information and expert insight into real risk management. The discussion begins with an overview of methods for computing and managing a variety of risk, then moves into a review of the economic foundation of modern risk management and the growing importance of model risk management. Market risk, portfolio credit risk,

counterparty credit risk, liquidity risk, profitability analysis, stress testing, and others are dissected and examined, arming you with the strategies you need to construct a robust risk management system. The book takes readers through a journey from basic market risk analysis to major recent advances in all financial risk disciplines seen in the banking industry. The quantitative methodologies are developed with ample business case discussions and examples illustrating how they are used in practice. Chapters devoted to firmwide risk and stress testing cross reference the different methodologies developed for the specific risk areas and explain how they work together at firmwide level. Since risk regulations have driven a lot of the recent practices, the book also relates to the current global regulations in the financial risk areas. Risk management is one of the fastest growing segments of the banking industry, fueled by banks' fundamental intermediary role in the global economy and the industry's profit-driven increase in risk-seeking behavior. This book is the product of the authors' experience in developing and implementing risk analytics in banks around the globe, giving you a comprehensive, quantitative-oriented risk management guide specifically for the practitioner. Compute and manage market, credit, asset, and liability risk Perform macroeconomic stress testing and act on the results Get up to date on regulatory practices and model risk management Examine the structure and construction of financial risk systems Delve into funds transfer pricing, profitability analysis, and more Quantitative capability is increasing with lightning speed, both methodologically and technologically. Risk professionals must keep pace with the changes, and exploit every tool at their disposal. Financial Risk Management is

the practitioner's guide to anticipating, mitigating, and preventing risk in the modern banking industry.

Chesapeake & Ohio K-4 Class 2-8-4 Steam Locomotives Dec 12 2020 The complete history of the C&O's famous K-4 Kanawha types, probably the most versatile of all C&O steam classes. Operated between 1943 and 1956, they handled fast freight, mainline coal trains, branch line coal trains, local freights, and passenger trains on almost every part of the C&O system. "This book gives diagrams of all orders encompassing the 90 locomotives, an HO scale mechanical drawing by Bob Hundman, and detailed history of the operations of these engines throughout their lives, illustrated by over 110 photos. Map and many tables of specifications are included.

Classroom Assessment Scoring System (CLASS) Manual Oct 22 2021 This manual provides a system overview, procedures, and scoring information for K–3 classroom observation.

Journal of Geomagnetism and Geoelectricity Jan 31 2020

Computer Vision – ECCV 2012 Oct 02 2022 The seven-volume set comprising LNCS volumes 7572-7578 constitutes the refereed proceedings of the 12th European Conference on Computer Vision, ECCV 2012, held in Florence, Italy, in October 2012. The 408 revised papers presented were carefully reviewed and selected from 1437 submissions. The papers are organized in topical sections on geometry, 2D and 3D shapes, 3D reconstruction, visual recognition and classification, visual features and image matching, visual monitoring: action and activities, models, optimisation, learning, visual tracking and image registration, photometry: lighting and colour, and image segmentation.

Kenya Gazette Sep 20 2021 The Kenya Gazette is an official publication of the government of the Republic of Kenya. It contains notices of new

legislation, notices required to be published by law or policy as well as other announcements that are published for general public information. It is published every week, usually on Friday, with occasional releases of special or supplementary editions within the week. **Hybrid (optical and Digital-electronic) Statistic Pattern Recognition** Oct 29 2019 **Classroom Assessment** Jun 25 2019 This book is based on the belief that decision making is perhaps the most critical of all teaching skills and that good assessments lie at the core of good decision making. To become better teachers then, teachers must learn to make informed decisions about both individual students (learning decisions) and about groups of students (teaching decisions). This book gives equal status to both types of decisions and shows how assessment is integral to both. The organization of the book is sequential, mirroring the way in which information should be used to make decisions. It begins with a conceptual framework linking information to decision making, then moves to the design of assessment instruments and the collection of assessment information, then to the interpretation of assessment information and, finally, to reporting the results of both the assessment and the decision-making process. There is an emphasis throughout on linking why teachers assess with what and how they assess. Other key features include: * Practical Framework -- The book's framework corresponds to the framework that teachers use to grade their students: conduct (classroom behavior), effort (student motivation), and achievement (student learning). * Unique Chapters -- There are separate chapters on interpreting assessment information prior to decision making and on reporting assessment information to parents, teachers, and administrators. * Flexibility -- Because of its modest length and price, and its practical

focus on the links between assessment and everyday teacher decision making, this text can be used either in full-length assessment courses for teachers or to teach the assessment units in educational psychology or integrated methods courses.
Estimates Apr 27 2022 Vols. for -1931/32 include Nigerian railway estimates.

Formal Concept Analysis Sep 28 2019 This first textbook on formal concept analysis gives a systematic presentation of the mathematical foundations and their relations to applications in computer science, especially in data analysis and knowledge processing. Above all, it presents graphical methods for representing conceptual systems that have proved themselves in communicating knowledge. The mathematical foundations are treated

thoroughly and are illuminated by means of numerous examples, making the basic theory readily accessible in compact form.
Current Issues in School Leadership Oct 10 2020 Current Issues in School Leadership examines controversies about, and affecting, school practices. Focusing on two essential questions--what is important to today's school leaders? and what is interfering with schooling processes?--it includes chapters by a broad range of authors, with expertise on their specific topic. The text is organized in three sections: *Social and Political Issues; *Curriculum

and Learning Issues; and *Organization and Management Issues. The goal of this text--designed for school leadership, educational administration, and foundations of education courses--is to challenge readers to think carefully and critically about each of the issues presented, leading to positive action and leadership.

Handbook of Mindfulness in Education Nov 30 2019 This handbook addresses the educational uses of mindfulness in schools. It summarizes the state of the science and describes current and emerging applications and challenges throughout the field. It explores mindfulness concepts in scientific, theoretical, and practical terms and examines training opportunities both as an aspect of teachers' professional development and a means to enhance students' social-emotional and academic skills. Chapters discuss mindfulness and contemplative pedagogy programs that have produced positive student outcomes, including stress relief, self-care, and improved classroom and institutional engagement. Featured topics include: A comprehensive view of mindfulness in the modern era. Contemplative education and the roots of resilience. Mindfulness practice and its effect on students' social-emotional learning. A cognitive neuroscience perspective on mindfulness in education that addresses students' academic and social skills development. Mindfulness training for teachers and administrators. Two universal mindfulness education programs for elementary and middle school students. The Handbook of Mindfulness in Education is a must-have resource for researchers, graduate students, clinicians, and practitioners in psychology, psychiatry, education, and medicine, as well as counseling, social work, and rehabilitation therapy.
Selected Works of Merton H.

Miller May 05 2020 Widely regarded as one of the founders of modern corporate finance, Merton H. Miller was awarded a Nobel Prize in 1990 for his work in the theory of finance and financial economics. Selected Works of Merton H. Miller gathers together in two volumes a selection of Miller's most influential contributions over more than fifty years of active research. A common theme running throughout both volumes is Miller's conviction about the utility of market-based approaches to topics as diverse as dividend policy, bank regulation, the structure of securities markets, and competition between research universities and teaching colleges. Miller was perhaps best known for a series of highly influential papers he cowrote in the 1950s and 1960s with fellow Nobel laureate Franco Modigliani that advanced a set of capital structure theorems later dubbed the "M and M propositions." In brief, the M and M propositions state that the actions of investors, firms, and capital markets will cause the market value of a firm to be independent of its capital structure. In other words, a corporation's value depends on its investments in people, ideas, and physical capital goods and not on the mix of bonds, stocks, and other securities used to finance the investments. Four of these papers are reprinted here, together with important later work by Miller in macroeconomics, corporate capital structure, management science, asset pricing, and the economic and regulatory problems of the financial services industry. Diverse and innovative, the papers in Selected Works of Merton H. Miller will interest students and practitioners of economics, finance, and business, as well as policymakers responsible for market regulation.

Recent Contributions in Intelligent Systems Sep 08 2020 This volume is a brief, yet comprehensive account of new

development, tools, techniques and solutions in the broadly perceived "intelligent systems". New concepts and ideas concern the development of effective and efficient models which would make it possible to effectively and efficiently describe and solve processes in various areas of science and technology. Special emphasis is on the dealing with uncertainty and imprecision that permeates virtually all real world processes and phenomena, and has to properly be modeled by formal and algorithmic tools and techniques so that they be adequate and useful. The papers in this volume concern a wide array of possible techniques exemplified by, on the one hand, logic, probabilistic, fuzzy, intuitionistic fuzzy, neuro-fuzzy, etc. approaches. On the other hand, they represent the use of such systems modeling tools as generalized nets, optimization and control models, systems analytic models, etc. They concerns a variety of approaches, from pattern recognition, image analysis, education system modeling, biological and medical systems modeling, etc.
