*The Culture of Tourism, the Tourism of Culture* Jan 11 2021 The Southwest has long been one of America's dreamscapes, a place we go to relive and reinvent our past for the purposes of the present. Yet the Southwest is a real place, too, one where people live and make a living. This collection of essays looks at the ways tourism affects people and places in the Southwest and at the region's meaning on the larger stage of national life. In the first section, *Configuring Ethnicity: The Meaning of Who You Are*, Chris Wilson, Phoebe Kropp, and Rena Swentzell explicate tourist sites in Albuquerque, California's Camino Real, and Taos. *Essays on Collecting and Belonging* include discussions of scrapbooks, souvenirs, and virtual tourism on the Internet by Marguerite Shaffer, Leah Dilworth, and Erika Bsumek. The third section, *The Practice of Tourism*, offers the perspectives of William L. Bryan, Jr., a leading ecotourism operator, and Susan Guyette and David White, who argue for the autonomy of native people in presenting their experience to visitors. The final section looks at how places are transformed by tourism. Sylvia Rodriguez examines the power dynamics of tourism, Char Miller chronicles the way San Antonio has become a colonial town, and volume editor

Hal Rothman presents Las Vegas as a place where authenticity and inauthenticity are purposefully indistinguishable.

**Combinatorics** Jul 25 2019 Combinatorics, Second Edition is a well-rounded, general introduction to the subjects of enumerative, bijective, and algebraic combinatorics. The textbook emphasizes bijective proofs, which provide elegant solutions to counting problems by setting up one-to-one correspondences between two sets of combinatorial objects. The author has written the textbook to be accessible to readers without any prior background in abstract algebra or combinatorics. Part I of the second edition develops an array of mathematical tools to solve counting problems: basic counting rules, recursions, inclusion-exclusion techniques, generating functions, bijective proofs, and linear algebraic methods. These tools are used to analyze combinatorial structures such as words, permutations, subsets, functions, graphs, trees, lattice paths, and much more. Part II cover topics in algebraic combinatorics including group actions, permutation statistics, symmetric functions, and tableau combinatorics. This edition provides greater coverage of the use of ordinary and exponential generating functions as a problem-solving tool. Along with two new chapters, several new sections, and improved exposition throughout, the textbook is brimming with many examples and exercises of various levels of difficulty.
