Practice Standard for Project Estimating - Second Edition Apr 25 2022 Project estimating plays a vital role in project management. Typically completed in the initial planning stages, accurate project estimation can be a difficult task. Organizations and project managers should use these initial estimates to baseline the project schedule and cost, then refine these estimates as the project develops. Accurate estimation and refinement of the estimates leads to better and earlier decision making, thus maximizing value. Developed within the framework of A Guide to the Project Management Body of Knowledge (PMBOK® Guide) &— Sixth Edition and other PMI standards, the Practice Standard for Project Estimating &— Second Edition focuses on providing models for the project management profession in both plan-driven and change-driven adaptive (agile) life cycles. This practice standard describes the aspects of project estimating that are recognized as good practice on most projects most of the time and that are widely recognized and consistently applied. PMI practice standards describe processes, activities, constraints, inputs, and outputs for specific discipline subject areas and are targeted to all practitioners within projectized organizations, not just project managers.

[Bicycle Justice and Urban Transformation](#) Oct 27 2019 As bicycle commuting grows in the United States, the profile of the white, middle-class cyclist has emerged. This stereotype evolves just as investments in cycling play an increasingly important role in neighborhood transformations. However, despite stereotypes, the cycling public is actually quite diverse, with the greatest share falling into the lowest income categories. Bicycle Justice and Urban Transformation demonstrates that for those with privilege, bicycling can be liberatory, a lifestyle choice, whereas for those surviving at the margins, cycling is not a choice, but an often oppressive necessity. Ignoring these "invisible" cyclists skews bicycle improvements towards those with choices. This book argues that it is vital to contextualize bicycling within a broader social justice framework if investments are to serve all street users equitably. "Bicycle justice" is an inclusionary social movement based on furthering material equity and the recognition that qualitative differences matter. This book illustrates equitable bicycle advocacy, policy and planning. In synthesizing the projects of critical cultural studies, transportation justice and planning, the book reveals the relevance of social justice to public and community-driven investments in cycling. This book will interest professionals, advocates, academics and students in the fields of transportation planning, urban planning, community development, urban geography, sociology and policy.

Social Practices, Intervention and Sustainability Aug 18 2021 In an era of dramatic environmental change, social change is desperately needed to curb burgeoning consumption. Many calls to action have focused on individual behaviour or technological innovation, with relative silence from the social sciences on other modes and methods of intervening in social life. This book shows how we can go beyond behaviour change in the pursuit of sustainability. Inspired by the 'practice turn' in consumption studies, this interdisciplinary book looks through the lens of social practice theory to explore important and timely questions about how to intervene in social life. It discusses a range of applied sustainability topics including energy consumption, housing provision, water demand, transport, climate change, curbside recycling and smart grids, seeking to redefine what intervention is, how it happens, and who or what can intervene to address the growing list of environmental calamities facing contemporary societies. These issues are explored through a range of specific case studies from Australia, the UK and the US, providing theoretical insights that are of international relevance. The book will be of interest to researchers and students in the fields of sociology, consumption studies, environmental studies, geography, and science and technology studies, as well as policy makers and practitioners seeking to intervene in social life for sustainability.

[Understanding Personalisation](#) Jan 23 2022 Understanding Personalization: New Aspects of Design and Consumption addresses the global phenomenon of personalization that affects many aspects of everyday life. The book identifies the dimensions of personalization and its typologies. Issues of privacy, the ethics of design, and the designer/maker's control versus the consumer's freedom are covered, along with sections on digital personalization, advances in new media technologies and software development, the way we communicate, our personal devices, and the way personal data is stored and used. Other sections cover the principles of personalization and changing patterns of consumption and development in marketing that facilitate individualized products and services. The book also assesses the convergence of both producers and consumers towards the co-creation of goods and services and the challenges surrounding personalization, customization, and bespoke marketing in the context of ownership and consumption. Offers multiple perspectives on personalization, a pervasive and complex issue Presents expertise and practical examples to help users understand personalization and its application to a variety of disciplines Breaks new ground in defining and explaining personalization in the context of individualized and micro-marketing

[Sustainability Pocketbook](#) Jun 03 2020 Managing sustainability is fast becoming critical to business success - to meeting customer and stakeholder expectations. The Sustainability Pocketbook is for managers who want to get involved in this area but are not sure where to start or what they can realistically do. You may not have direct responsibility for environmental issues within your job, but you can make a difference. Starting by defining and demystifying the topic, the Sustainability Pocketbook sets out a model for sustainability within six main areas of activity (environment, workplace, supply chain, marketplaces and community). Full of useful frameworks and relevant topical cases from around the world, it encourages you to challenge current thinking and practices in order to create and deliver an action plan. If you want to find practical tips to help you embed sustainability into your everyday work, this is the place to start.

[The Cycle of Excellence](#) Jun 27 2022 How do the good become great? Practice! From musicians and executives to physicians and drivers, aspiring professionals rely on deliberate practice to attain expertise. Recently, researchers have explored how psychotherapists can use the same processes to enhance the effectiveness of psychotherapy supervision for career-long professional development. Based on this empirical research, this edited volume brings together leading supervisors and researchers to explore a model for supervision based on behavioral rehearsal with continuous corrective feedback. Demonstrating how this model complements and enhances a traditional, theory-based approach, the authors explore practical methods that readers can use to improve the effectiveness of their own psychotherapy training and supervision. This book is the 2018 Winner of the American Psychological Association Supervision & Training Section's Outstanding Publication of the Year Award.

Life Cycle Assessment (LCA) Nov 01 2022 This first hands-on guide to ISO-compliant Life Cycle Assessment (LCA) makes this powerful tool immediately accessible to both professionals and students. Following a general introduction on the philosophy and purpose of LCA, the reader is taken through all the stages of a complete LCA analysis, with each step exemplified by real-life data from a major LCA project on beverage packaging. Measures as carbon and water footprint, based on the most recent international standards and definitions, are addressed. Written by two pioneers of LCA, this practical volume is targeted at first-time LCA users but equally makes a much-valued reference for more experienced practitioners. From the content: * Goal and Scope Definition * Life Cycle Inventory Analysis * Life Cycle Impact Assessment * Interpretation, Reporting and Critical Review * From LCA to Sustainability Assessment and more.

The Five Practices in Practice [High School] Jul 29 2022 "This book makes the five practices accessible for high school mathematics teachers. Teachers will see themselves and their classrooms throughout the book. High school mathematics departments and teams can use this book as a framework for engaging professional collaboration. I am particularly excited that this book situates the five practices as ambitious and equitable practices." Robert Q. Berry, III NCTM President 2018-2020 Samuel Braley Gray Professor of Mathematics Education, University of Virginia Take a deeper dive into understanding the five practices—anticipating, monitoring, selecting, sequencing, and connecting—for facilitating productive mathematical conversations in your high school classrooms and learn to apply them with confidence. This follow-up to the modern classic, 5 Practices for Orchestrating Productive Mathematics Discussions, shows the five practices in action in high school classrooms and empowers teachers to be prepared for and overcome the challenges common to orchestrating math discussions. The chapters unpack the five practices and guide teachers to a deeper understanding of how to use each practice effectively in an inquiry-oriented classroom. This book will help you launch meaningful mathematical discussion through - Key questions to set learning goals, identify high-level tasks, anticipate student responses, and develop targeted assessing and advancing questions that jumpstart productive discussion—before class begins - Video excerpts from real high school classrooms that vividly illustrate the five practices in action and include built-in opportunities for you to consider effective ways to monitor students' ideas, and successful approaches for selecting, sequencing, and connecting students' ideas during instruction - "Pause and Consider" prompts that help you reflect on an issue—and, in some cases, draw on your own classroom experience—prior to reading more about it - "Linking To Your Own Instruction" sections help you implement the five practices with confidence in your own instruction The book and companion website provide an array of resources including planning templates, sample lesson plans, completed monitoring tools, and mathematical tasks. Enhance your fluency in the five practices to bring powerful discussions of mathematical concepts to life in your classroom.

The Confessions of Timmy Day Jul 25 2019 I originally thought of the idea of writing a book whilst I was off work sick, I wanted to write about my life as a drummer, whilst recollecting about the bands I've played with, memories from my childhood began to surface, I realised I have many stories to tell. As you read through this book you'll see how I managed to make good of every situation, every accident, incident or relationship failure, I literally just carried on until the next event. I made it to 48 before the past caught up with me.

Bicycle Urbanism Nov 28 2019 Over recent decades, bicycling has received renewed interest as a means of improving transportation through crowded cities, improving personal health, and reducing environmental impacts associated with travel. Much of the discussion surrounding cycling has focused on bicycle facility design—how to best repurpose road infrastructure to accommodate bicycling. While part of the discussion has touched on culture, such as how to make bicycling a larger part of daily life, city design and planning have been sorely missing from consideration. Whilst interdisciplinary in its scope, this book takes a primarily planning approach to examining active transportation, and especially bicycling, in urban areas. The volume examines the land use aspects of the city—not just the streetscape. Illustrated using a range of case studies from the USA, Canada, and Australia, the volume provides a comprehensive overview of key topics of concern around cycling in the city including: imagining the future of bicycle-friendly cities; integrating bicycling into urban planning and design; the effects of bike use on health and environment; policies for developing bicycle infrastructure and programs; best practices in bicycle facility design and implementation; advances in technology, and economic contributions.

Reconsidering the Bicycle Dec 22 2021 In cities throughout the world, bicycles have gained a high profile in recent years, with politicians and activists promoting initiatives like bike lanes, bikeways, bike share programs, and other social programs to get more people on bicycles. Bicycles in the city are, some would say, the wave of the future for car-choked, financially-strapped, obese, and sustainability-sensitive urban areas. This book explores how and why people are reconsidering the bicycle, no longer thinking of it simply as a toy or exercise machine, but as a potential solution to a number of contemporary problems. It focuses in particular on what reconsidering the bicycle might mean for everyday practices and politics of urban mobility, a concept that refers to the intertwined physical, technological, social, and experiential dimensions of human movement. This book is for Introductory Anthropology, Cultural Anthropology, Cultural Sociology, Environmental Anthropology, and all undergraduate courses on the environment and on sustainability throughout the social sciences.

Global Japanization? Feb 09 2021 Global Japanization? Brings together research from North America, Japan, Europe and Latin America to analyse the influence of Japanese manufacturing investment and Japanese working practices across the global economy. The editors present original case studies of work reorganization and workers' experiences within both Japanese companies and those of their competitors in diverse sectors and national settings. These studies provide a wide-ranging critique of conventional accounts of Japanese models of management and production, and their implications for employees. They offer new evidence and fresh perspectives on the

role of "transplants" in disseminating manufacturing innovations, and on the responses of non-Japanese firm in reorganizing production operations and industrial relations.

[Understanding Urban Cycling](#) Dec 30 2019 Academic interest in cycling has burgeoned in recent years with significant literature relating to the health and environmental benefits of cycling, the necessity for cycle-specific infrastructure, and the embodied experiences of cycling. Based upon primary research in a variety of contexts such as London, Shanghai and Taipei, this book demonstrates that recent developments in urban cycling policy and practice are closely linked to broader processes of capital accumulation. It argues that cycling is increasingly caught up in discourses around Smart cities that emphasise technological solutions to environmental problems and neoliberal ideas on individual responsibility and biopolitical conduct, which only results in solutions that prioritise those who are already mobile. The central argument of the book is not that the popularisation of cycling is inherently bad, but that the manner in which cycling is being popularised gives cause for social and environmental concern. Ultimately the book argues that cycling has now become a vehicle for sustaining pro-growth agendas rather than subverting them or shifting to sustainable no-growth/de-growth and less technologically driven visions of modernity. This book makes an innovative contribution to the fields of Cycling Studies, Mobilities and Transport and will be of interest to students and academics working in Human Geography, Transport Studies, Urban Studies, Urban Planning, Public Policy, Sociology and Sustainability.

This book will teach practitioners how to motivate and instruct patients on the importance of exercise and how to design practical exercise programs for patients of all ages and fitness levels, as well as those with special conditions such as pregnancy, obesity, and cancer. Coverage includes in-depth discussions of both the lifestyle exercise approach to exercising regularly and the structured exercise approach.

[Cycling](#) Jul 17 2021 Cycling: A Sociology of Velomobility explores cycling as a sociological phenomenon. Drawing on extensive ethnographic fieldwork, it considers the interaction of materials, competencies and meanings that comprise a variety of cycling practices. What might appear at first to be self-evident actions are shown to be constructed through the interplay of numerous social and political forces. Using a theoretical framework from mobilities studies, its central themes respond to the question of what it is about cycling that provokes so much interest and passion, both positive and negative. Individual chapters consider how cycling has appeared as theme and illustration in social theory, as well as the legacies of these theorizations. The book expands on the image of cycling practices as the product of an assemblage of technology, rider and environment. Riding spaces as material technologies are found to be as important as the machinery of the cycle, and a distinction is made between routes and rides to help interpret aspects of journey-making. Ideas of both affordance and script are used to explore how elements interact in performance to create sensory and experiential scapes. Consideration is also given to the changing identities of cycling practices in historical and geographical perspective. The book adds to existing research by extending the theorization of cycling mobilities. It engages with both current and past debates on the place of cycling in mobility systems and the problems of researching, analyzing and communicating ephemeral mobile experiences.

[The Innovation Systems Cycle](#) Sep 30 2022 Currently, the prime focus for US business plans should not be on the manufacturing process design and delivery processes, but on greatly improving innovation leadership, design engineering capability, and sales and marketing innovation. These three areas have been sadly lacking significant performance improvement during the past 20 years. The magic word for US business is "simplification." Most of the books written to date focus on the solution development aspect of the Innovation System Cycle, which is less than 15% of the total innovative system. Focusing on solution development is only the start -- the rest of the innovation system cycle is what turns an idea into a profitable business. The techniques in this book are directed at key tasks across the innovative process, such as maximizing quality, productivity, maintainability, usability, and reliability, while focusing on reducing the product cycle time and costs within the innovative process. This book uses more than 50 different approaches/concepts, which leads the reader in a very simple method for understanding, establishing, and effectively using an innovative system to provide a significant marketing advantage. Previous books have focused on what to do; however, this book focuses on how to do it. It transforms a complicated complex system into easy-to-use and understand methodology.

[Life Cycle Assessment](#) May 27 2022 Life Cycle Assessment (LCA) has developed in Australia over the last 20 years into a technique for systematically identifying the resource flows and environmental impacts associated with the provision of products and services. Interest in LCA has accelerated alongside growing demand to assess and reduce greenhouse gas emissions across different manufacturing and service sectors. Life Cycle Assessment focuses on the reflective practice of LCA, and provides critical insight into the technique and how it can be used as a problem-solving tool. It describes the distinctive strengths and limitations of LCA, with an emphasis on practice in Australia, as well as the application of LCA in waste management, the built environment, water and agriculture. Supported by examples and case studies, each chapter investigates contemporary challenges for environmental assessment and performance improvement in these key sectors. LCA methodologies are compared to the emerging climate change mitigation policy and practice techniques, and the uptake of 'quick' LCA and management tools are considered in the light of current and changing environmental agendas. The authors also debate the future prospects for LCA technique and applications.
