Medical Support of the Army Air Forces in World War II Aug 15 2021

The Why Axis Sep 23 2019 Based on groundbreaking original research, The Why Axis is a colourful examination of why people do what they do - and how effective incentives can spur people to change their behaviour and achieve more. Uri Gneezy and John List are a little like the anthropologists who spend months in the field studying people in their native environments. But rather than acting as impartial observers, these two intrepid economists have set out to study the ways people act in order to try to solve major problems in society, such as the gap between rich and poor students and the violence plaguing inner city schools; the real reasons people discriminate; and the continuing pay disparity between men and women. Their field experiments in the factories, communities, and shops where real people live, work, and play show how incentives can change outcomes. Their results will change the way you think about and take action on both small and large problems, and force us as a society to stop making assumptions and to rely instead upon the evidence of what really works.

[Sphere Packings, Lattices and Groups](#) Oct 25 2019 The second edition of this timely, definitive, and popular book continues to pursue the question: what is the most efficient way to pack a large number of equal spheres in n-dimensional Euclidean space? The authors also continue to examine related problems such as the kissing number problem, the covering problem, the quantizing problem, and the classification of lattices and quadratic forms. Like the first edition, the second edition describes the applications of these questions to other areas of mathematics and science such as number theory, coding theory, group theory, analog-to-digital conversion and data compression, n-dimensional crystallography, and dual theory and superstring theory in physics. Results as of 1992 have been added to the text, and the extensive bibliography - itself a contribution to the field - is supplemented with approximately 450 new entries.

Applied Equity Analysis and Portfolio Management, + Online Video Course Feb 21 2022 A "hands-on" guide to applied equity analysis and portfolio management From asset allocation to modeling the intrinsic value of a stock, Applied Equity Analysis and Portfolio Management + Online Video Course offers readers a solid foundation in the practice of fundamental analysis using the same tools and techniques as professional investors. Filled with real-world illustrations and hands-on applications, Professor Weigand's learning system takes a rigorous, empirical approach to topics such as analyzing the macro-finance environment, sector rotation, financial analysis and valuation, assessing a company's competitive position, and reporting the performance of a stock portfolio. Unlike typical books on this subject—which feature chapters to read and exercises to complete—this resource allows readers to actively participate in the learning experience by completing writing exercises and manipulating interactive spreadsheets that illustrate the principles being taught. The learning system also features instructional videos that demonstrate how to use the spreadsheet models and excerpts from the author's blog, which are used to depict additional examples of the analysis process. Along the way, it skillfully outlines an effective approach

to creating and interpreting outputs typically associated with a top-down money management shop — including a macroeconomic forecasting newsletter, detailed stock research reports, and a portfolio performance attribution analysis. Covers topics including active and passive money management, fundamental analysis and portfolio attribution analysis Companion streaming videos show how to use free online data to create your own analyses of key economic indicators, individual stocks, and stock portfolios A valuable resource for universities who have applied equity analysis and portfolio management courses Practical and up-to-date, the book is an excellent resource for those with a need for practical investment expertise.

Advances in Laser Spectroscopy Jun 01 2020 This volume contains the lectures and seminars presented at the NATO Advanced Study Institute on IIAdvances in Laser Spectroscopyll the tenth course of the Europhysics School of Quantum Electronics, held under the supervision of the Quantum Electronics Division of the European Physical Society. The Institute was held at Centro "I Cappuccinill San Miniato, Tuscany, July 26, - August 7, 1981. The Europhysics School of Quantum Electronics was started in 1970 with the aim of providing instruction for young researchers and advanced students already engaged in the area of quantum electronics or wishing to switch to this area from a different background. From the onset, the School has been under the direction of Prof. F. T. Arecchi, then at the University of Pavia, now at the University of Florence, .and Dr. D. Roess of Siemens, Munich. In 1981, Prof. H. Walther, University of Munich and Max-Planck Institut fUr Quantenoptik joined as director. Each year the Directors choose a subject of particular interest, alternating fundamental topics with technological ones, and ask colleagues specifically competent in a given area to take the scientific responsibility for that course.

The City as an Entertainment Machine Jul 22 2019 This volume explores how consumption and entertainment change cities, but it reverses the 'normal' causal process. That is, many chapters analyze how consumption and entertainment drive urban development, not vice versa. People both live and work in cities and where they choose to live shifts where and how they work. Amenities enter as enticements to bring new residents or tourists to a city and so amenities have thus become new public concerns for many cities in the U.S. and much of Northern Europe. Old ways of thinking, old paradigms -- such as 'location, location, location' and 'land, labor, capital, and management generate economic development' -- are too simple. So is 'human capital drives development'. To these earlier questions we add, 'How do amenities and related consumption attract talented people, who in turn drive the classic processes which make cities grow?' This new question is critical for policy makers, urban public officials, business, and non-profit leaders who are using culture, entertainment, and urban amenities to enhance their locations -- for present and future residents, tourists, conventioners, and shoppers. The City as an Entertainment Machine details the impacts of opera, used bookstores, brew pubs, bicycle events, Starbucks' coffee shops, gay residents, and other factors on changes in jobs, population, inventions, and more. It is the first study to assemble and analyze such amenities for national samples of cities (and counties). It interprets these processes by showing how they add new insights from economics, sociology, political science, public policy, and geography. Considerable evidence is presented about how consumption, amenities, and culture drive urban policy by encouraging people to move to or from different cities and regions.

Cosmos & Culture Aug 27 2022 From GPO Bookstore's Website: Authors with diverse backgrounds in science, history, anthropology, and more, consider culture in the context of the cosmos. How does our knowledge of cosmic evolution affect terrestrial culture? Conversely, how does our knowledge of cultural evolution affect our thinking about possible cultures in the cosmos? Are life, mind, and culture of fundamental significance to the grand story of the cosmos that has generated its own self-understanding through science, rational reasoning, and mathematics? Book includes bibliographical references and an index.

Multiple Objective Decision Making – Methods and Applications Jan 20 2022 Decision making is the process of selecting a possible course of action from all the available alternatives. In almost all such problems the multiplicity of criteria for judging the alternatives is pervasive. That is, for many such

problems, the decision maker (OM) wants to attain more than one objective or goal in selecting the course of action while satisfying the constraints dictated by environment, processes, and resources. Another characteristic of these problems is that the objectives are apparently non commensurable. Mathematically, these problems can be represented as: $(1. 1) \text{ subject to: } g_i(\sim) \sim 0, \dots, !$ where \sim is an n dimensional decision variable vector. The problem consists of n decision variables, m constraints and k objectives. Any or all of the functions may be nonlinear. In literature this problem is often referred to as a vector maximum problem (VMP). Traditionally there are two approaches for solving the VMP. One of them is to optimize one of the objectives while appending the other objectives to a constraint set so that the optimal solution would satisfy these objectives at least up to a predetermined level. The problem is given as: $\text{Max } f. \sim) 1 (1. 2)$ subject to: where t is any acceptable predetermined level for objective t . The other approach is to optimize a super-objective function created by multiplying each 2 objective function with a suitable weight and then by adding them together.

During the course of his investigation he interviews a person of interest who is the vice president of the victims company. He interviews her for a second time and there starts a romantic connection between the two. The antagonist in this book is a Russian operative named Jason who is tasked to acquire secrets from a high level American diplomat. The romantic interest in this novel name is Susan Conway and she is the vice president of the Sykes Empire. Cynthia Sykes is the victim in this novel.

Shadow Elite Jan 28 2020 It can feel like we're swimming in a sea of corruption. It's unclear who exactly is in charge and what role they play. The same influential people seem to reappear time after time in different professional guises, pressing their own agendas in one venue after another. According to award-winning public policy scholar and anthropologist Janine Wedel, these are the powerful "shadow elite," the main players in a vexing new system of power and influence. In this groundbreaking book, Wedel charts how this shadow elite, loyal only to their own, challenge both governments'; rules of accountability and business codes of competition to accomplish their own goals. From the Harvard economists who helped privatize post-Soviet Russia and the neoconservatives who have helped privatize American foreign policy (culminating with the debacle that is Iraq) to the many private players who daily make public decisions without public input, these manipulators both grace the front pages and operate behind the scenes. Wherever they maneuver, they flout once-sacrosanct boundaries between state and private. Profoundly original, Shadow Elite gives us the tools we need to recognize these powerful yet elusive players and comprehend the new system. Nothing less than our ability for self-government and our freedom are at stake.

Turbulence Nov 18 2021 This textbook presents a modern account of turbulence, one of the greatest challenges in physics. The state-of-the-art is put into historical perspective five centuries after the first studies of Leonardo and half a century after the first attempt by A.N. Kolmogorov to predict the properties of flow at very high Reynolds numbers. Such "fully developed turbulence" is ubiquitous in both cosmical and natural environments, in engineering applications and in everyday life. First, a qualitative introduction is given to bring out the need for a probabilistic description of what is in essence a deterministic system. Kolmogorov's 1941 theory is presented in a novel fashion with emphasis on symmetries (including scaling transformations) which are broken by the mechanisms producing the turbulence and restored by the chaotic character of the cascade to small scales. Considerable material is devoted to intermittency, the clumpiness of small-scale activity, which has led to the development of fractal and multifractal models. Such models, pioneered by B. Mandelbrot, have applications in numerous fields besides turbulence (diffusion limited aggregation, solid-earth geophysics, attractors of dynamical systems, etc). The final chapter contains an introduction to analytic theories of the sort pioneered by R. Kraichnan, to the modern theory of eddy transport and renormalization and to recent developments in the statistical theory of two-dimensional turbulence. The book concludes with a guide to further reading. The intended readership for

the book ranges from first-year graduate students in mathematics, physics, astrophysics, geosciences and engineering, to professional scientists and engineers.

Safety in the Installation and Use of Gas Systems and Appliances Apr 23 2022 This Approved Code of Practice relates to the Gas Safety Installation and Use Regulations 1998 which update, consolidate and replace the 1994 regulations. The regulations deal with the safe installation, maintenance and use of gas systems, including gas fittings, appliances and flues in domestic and commercial premises.

Chemistry and Technology of Lubricants Jan 08 2021 The use of lubricants began in ancient times and has developed into a major international business through the need to lubricate machines of increasing complexity. The impetus for lubricant development has arisen from need, so lubricating practice has preceded an understanding of the scientific principles. This is not surprising as the scientific basis of the technology is, by nature, highly complex and interdisciplinary. However, we believe that the understanding of lubricant phenomena will continue to be developed at a molecular level to meet future challenges. These challenges will include the control of emissions from internal combustion engines, the reduction of friction and wear in and continuing improvements to lubricant performance and machinery, life-time. More recently, there has been an increased understanding of the chemical aspects of lubrication, which has complemented the knowledge and understanding gained through studies dealing with physics and engineering. This book aims to bring together this chemical information and present it in a practical way. It is written by chemists who are authorities in the various specialisations within the lubricating industry, and is intended to be of interest to chemists who may already be working in the lubricating industry or in academia, and who are seeking a chemist's view of lubrication. It will also be of benefit to engineers and technologists familiar with the industry who require a more fundamental understanding of lubricants.

Gilgamesh Epic and Old Testament Parallels Jun 25 2022 Cuneiform records made some three thousand years ago are the basis for this essay on the ideas of death and the afterlife and the story of the flood which were current among the ancient peoples of the Tigris-Euphrates Valley. With the same careful scholarship shown in his previous volume, *The Babylonian Genesis*, Heidel interprets the famous Gilgamesh Epic and other related Babylonian and Assyrian documents. He compares them with corresponding portions of the Old Testament in order to determine the inherent historical relationship of Hebrew and Mesopotamian ideas.

Earth-affecting Solar Transients Jun 13 2021 Earth-affecting solar transients encompass a broad range of

phenomena, including major solar flares, CMEs, ICMEs, solar energetic particle events, and corotating interaction regions. In the past decade, nearly continuous observations of the Sun and the inner heliosphere with an unprecedented wide spatial coverage from a fleet of spacecraft, including STEREO Ahead/Behind, SDO, SOHO, Messenger, Venus Express, ACE and WIND, in combination with a significant advancement of global MHD numerical simulation and theoretical analysis, have greatly improved our understanding of solar transients and the prediction of their potential impact on Earth. This Topical Collection is based on the International Study of Earth-affecting Solar Transients (ISEST) project, initially launched in 2013 to bring together scientists from many countries to join efforts on studying solar transients. ISEST became one of the four research projects of the Variability of the Sun and Its Terrestrial Impact (VarSITI) program, sponsored by the Scientific Committee on Solar-Terrestrial Physics (SCOSTEP) for the period of 2014 - 2018. The Warhol Economy Nov 25 2019 Which is more important to New York City's economy, the gleaming corporate office--or the grungy rock club that launches the best new bands? If you said "office," think again. In *The Warhol Economy*, Elizabeth Currid argues that creative industries like fashion, art, and music drive the economy of New York as much as--if not more than--finance, real estate, and law. And these creative industries are fueled by the social life that whirls around the clubs, galleries, music venues, and fashion shows where creative people meet, network, exchange ideas, pass judgments, and set the trends that shape popular culture. The implications of Currid's argument are far-reaching, and not just for New York. Urban policymakers, she suggests, have not only seriously underestimated the importance of the cultural economy, but they have failed to recognize that it depends on a vibrant creative social scene. They haven't understood, in other words, the social, cultural, and economic mix that Currid calls the Warhol economy. With vivid first-person reporting about New York's creative scene, Currid takes the reader into the city spaces where the social and economic lives of creativity merge. The book has fascinating original interviews with many of New York's important creative figures, including fashion designers Zac Posen and Diane von Furstenberg, artists Ryan McGinness and Futura, and members of the band Clap Your Hands Say Yeah. The economics of art and culture in New York and other cities has been greatly misunderstood and underrated. *The Warhol Economy* explains how the cultural economy works--and why it is vital to all great cities.
