Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow Nov 08 2020 Through a series of recent breakthroughs, deep learning has boosted the entire field of machine learning. Now, even programmers who know close to nothing about this technology can use simple, efficient tools to implement programs capable of learning from data. This practical book shows you how. By using concrete examples, minimal theory, and two production-ready Python frameworks—Scikit-Learn and TensorFlow—author Aurélien Géron helps you gain an intuitive understanding of the concepts and tools for building intelligent systems. You'll learn a range of techniques, starting with simple linear regression and progressing to deep neural networks. With exercises in each chapter to help you apply what you've learned, all you need is programming experience to get started. Explore the machine learning landscape, particularly neural nets Use Scikit-Learn to track an example machine-learning project end-to-end Explore several training models, including support vector machines, decision trees, random forests, and ensemble methods Use the TensorFlow library to build and train neural nets Dive into neural net architectures, including convolutional nets, recurrent nets, and deep reinforcement

learning Learn techniques for training and scaling deep neural nets

Control Your Windows 7 View Nov 01 2022 With the proliferation of multiple monitor systems, we should not be stuck with multiple copies of the same image on all of those monitors. Follow this illustrated step-by-step guide and you will not have to tolerate that visual nuisance. We will go through all steps required to use a single wallpaper across all of the screens that may be attached to your desktop or laptop computer system. A two-monitor setup seems to be somewhat of a standard configuration for work and gaming systems. You may have three, four, or even eight monitors; and you can use a single wallpaper across all of them.
