Buying America Back Mar 03 2020 Cynics suggest that American manufacturing has reached the end of its road and is the price we pay for “globalization.” Alan Uke sees it differently. In *Buying America Back* he outlines solutions to put control back in the hands of American consumers by helping them to make wise buying choices that help our economy and help to create jobs. Mr. Uke was the architect of the successful federal Automobile Smog Index. He is now proposing a bill before Congress to create a new country of origin label for manufactured goods. This informative but simple tag would help reinvigorate American industry by educating consumers to use one of the most effective tools they have—the power of the pocketbook. Surprising and enlightening, *Buying America Back* encourages us to take action to do our part as responsible consumers and conscientious citizens. American prosperity is not a thing of the past, and this book shows us the way back.

The Automotive Industry and European Integration Nov 22 2021 This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers regarding how European integration and Brexit may impact future auto industry investment for all EU nations.

Experimenting for Sustainable Transport Jul 07 2020 Technological change is a central feature of modern societies and a powerful source for social change. There is an urgent task to direct these new technologies towards sustainability, but society lacks perspectives, instruments and policies to accomplish this. There is no blueprint for a sustainable future, and it is necessary to experiment with alternative paths that seem promising. Various new transport technologies promise to bring sustainability benefits. But as this book shows, important lessons are often overlooked because the experiments are not designed to challenge the basic assumptions about established patterns of transport choices. Learning how to organise the process of innovation implementation is essential if the maximum impact is to be achieved - it is here that strategic niche management offers new perspectives. The book uses a series of eight recent experiments with electric vehicles, carsharing schemes, bicycle pools and fleet management to illustrate the means by which technological change must be closely linked to social change if successful implementation is to take place. The basic divide between proponents of technological fixes and those in favour of behavioural change needs to be bridged, perhaps indicating a third way.

The Car Show Jul 27 2019 This e-book details the most interesting and important characteristics of the automobiles, car maintenance, styling features, car body style, the standard classification of the cars, an history of the automobiles, introduction in the automotive industry, and the traffic code, rules and signs. An automobile, usually called a car (an old word for carriage) or a truck, is a wheeled vehicle that carries its own engine. Older terms include horseless carriage and motor car, with “motor” referring to what is now usually called the engine. It has seats for the driver and, almost without exception, for at least one passenger. The automobile was hailed as an environmental improvement over horses when it was first introduced. Before its introduction, in New York City, over 10,000 tons of manure had to be removed from the streets daily. However, in 2006 the automobile is one of the primary sources of worldwide air pollution and cause of substantial noise and health effects.

Enhanced Transition Through Outward Internationalization May 05 2020 This title was first published in 2003. Among the major challenges transition economies are facing is how to cope with globalization. Foreign direct investment (FDI) has proved the most dynamic (defensive and offensive) response, as an integration and network tool, yet outward FDI has so far been overlooked in research. The vitality of outward FDI as an entry mode to the global economy is discussed in this authoritative volume from various angles, beginning with the context of the development strategy and the transition process. The experiences of the Slovene way of internationalization are compared with those of other transition economies. Readers will learn about the size, geographical distribution, trends and sectoral allocation of such outward FDI (OFDI) as well as the major motives, barriers and problems. The book also responds to questions about the extent to which outward FDI is instrumental in development/transition, EU accession and competitiveness strengthening. Based on extensive empirical research and focused case studies, the volume provides valuable lessons for other EU candidate countries and transition economies, while managerial experiences in entering Central and Eastern European markets offer universal internationalization lessons.
