Army RD & A. Feb 05 2021 Professional publication of the RD & A community. *Management of the Department of Defense: Oversight of the Army's test, measurement, and diagnostic equipment program* Mar 06 2021 *Opportunities in Neuroscience for Future Army Applications* Jul 10 2021 Advances and major investments in the field of neuroscience can enhance traditional behavioral science approaches to training, learning, and other applications of value to the Army. Neural-behavioral indicators offer new ways to evaluate how well an individual trainee has assimilated mission critical knowledge and skills, and can also be used to provide feedback on the readiness of soldiers for combat. Current methods for matching individual capabilities with the requirements for performing high-value Army assignments do not include neuropsychological, psychophysiological, neurochemical or neurogenetic

components; simple neuropsychological testing could greatly improve training success rates for these assignments. Opportunities in Neuroscience for Future Army Applications makes 17 recommendations that focus on utilizing current scientific research and development initiatives to improve performance and efficiency, collaborating with pharmaceutical companies to employ neuropharmaceuticals for general sustainment or enhancement of soldier performance, and improving cognitive and behavioral performance using interdisciplinary approaches and technological investments. An essential guide for the Army, this book will also be of interest to other branches of military, national security and intelligence agencies, academic and commercial researchers, pharmaceutical companies, and others interested in applying the rapid advances in neuroscience to the performance of individual and group tasks.

The Changing Nature of Work Jun 28 2020 Although there is great debate about how work is changing, there is a clear consensus that changes are fundamental and ongoing. The Changing Nature of Work examines the evidence for change in the world of work. The committee provides a clearly illustrated framework for understanding changes in work and these implications for analyzing the structure of occupations in both the civilian and military sectors. This volume explores the increasing demographic diversity of the workforce, the fluidity of boundaries between lines of work, the interdependent choices for how work is structured-and ultimately, the need for an integrated systematic approach to understanding how work is changing. The book offers a rich array of data and highlighted examples on: Markets, technology, and many other external conditions affecting the nature of work. Research findings on American workers and how they feel about work. Downsizing and the trend toward flatter organizational hierarchies. Autonomy, complexity, and other aspects of work structure. The committee reviews the evolution of occupational analysis and examines the effectiveness of the latest systems in characterizing current and projected changes in civilian and military work. The occupational structure and changing work requirements in the Army are presented as a case study.

What the Army Needs to Know to Align Its Operational and Institutional Activities May 20 2022 The Army must transform its institutional activities to align them with operating forces to improve support and release resources from institutional activities. This document provides a model for evaluating value chains to promote the alignment of needs and resources according to three representational institutional Army activities: medical services, enlisted accessioning, and short-term acquisition.

The 71F Advantage Sep 12 2021 Includes a foreword by Major General David A. Rubenstein. From the editor: "71F, or "71 Foxtrot," is the AOC (area of concentration) code assigned by the U.S. Army to the specialty of Research Psychology. Qualifying as an Army research psychologist requires, first of all, a Ph.D. from a research (not clinical) intensive graduate psychology program. Due to their advanced education, research psychologists receive a direct commission as Army officers in the Medical Service Corps at the rank of captain. In terms of numbers, the 71F AOC is a small one, with only 25 to 30 officers serving in any given year. However, the 71F impact is much bigger than this small cadre suggests. Army research psychologists apply their extensive training and expertise in the science of psychology and social behavior toward understanding, preserving, and enhancing the health, well being, morale, and performance of Soldiers and military families. As is clear throughout the pages of this book, they do this in many ways and in many areas, but always with a scientific approach. This is the 71F advantage: applying the science of psychology to understand the human dimension, and developing programs, policies, and products to benefit the person in military operations. This book grew out of the April 2008 biennial conference of U.S. Army Research Psychologists, held in Bethesda, Maryland. This meeting was to be my last as Consultant to the Surgeon General for Research Psychology, and I thought it would be a good idea to publish proceedings, which had not been done before. As Consultant, I'd often wished for such a document to help explain to people what it is that Army Research Psychologists "do for a living." In addition to our core group of 71Fs, at the Bethesda 2008 meeting we had several brand-new members, and a number of distinguished retirees, the "grey-beards" of the 71F clan. Together with longtime 71F colleagues Ross Pastel and Mark Vaitkus, I also saw an unusual opportunity to capture some of the history of the Army Research Psychology specialty while providing a representative sample of current 71F research and activities. It seemed to us especially important to do this at a time when the operational demands on the Army and the total force were reaching unprecedented levels, with no sign of easing, and with the Army in turn relying more heavily on research psychology to inform its programs for protecting the health, well being, and performance of Soldiers and their families."

Opportunities in Biotechnology for Future Army Applications Mar 26 2020 This report surveys opportunities for future Army applications in biotechnology, including sensors, electronics and computers, materials, logistics, and medical therapeutics, by matching commercial trends and developments with enduring Army requirements. Several biotechnology areas are identified as important for the Army to exploit, either by direct funding of research or by indirect influence of commercial sources, to achieve significant gains in combat effectiveness before 2025.

The Process of Developing and Improving Course Content for Military Technical Training Jul 30 2020 Curriculum development procedures in use as of 1966 for first- enlistment technical training in the Army, Navy, and Air Force are analyzed. A model process for training curriculum development was defined from training research findings and practices: (a) Analyze the system, (b) develop task inventories, (c) develop a job model, (d) analyze its tasks, (e) derive training objectives, (f) develop the training program, and (g) monitor the trained product and modify the curriculum. A comparison between this model and the training development procedures in use in the services indicated a need for (a) better procedures for determining the adequacy of training content and the means for improvement; (b) detailed guidance for developing or conducting the first four steps of the model process, criteria for allocating training content to formal instruction or on-the-job learning, performance specifications for graduates, and feedback from training programs; and (c) more opportunities for career fields in training.

Army Medical Support to the Army After Next Dec 23 2019 The Army Medical Department is planning now to ensure that the Army will have the required medical capabilities in 2025. As part of this planning, it conducted Medical Technology Workshop 1999 to investigate technologies for future medical concepts and capabilities. Besides gleaning insights from both the functional and Technology perspectives into such areas medical informatics, combat service support, and biological and chemical defense, RAND analysts in this report also identify areas warranting further investigation. The authors also discuss methods of improving future workshops.

Body Composition and Physical Performance Aug 23 2022 This book surveys the entire field of body composition as it relates to performance. It includes a clear definition of terminology and a discussion of the various methods for measuring body composition. The authored papers represent a state-of-the-art review of this controversial field and address questions such as: What is a better measure of body composition—body fat or lean body mass? Does being overweight for one's height really affect performance? The book also addresses the issue of physical appearance as it relates to body fatness and performance. It

includes an in-depth discussion of many of the topics of interest to those involved in sports medicine and exercise physiology.

How the Army Runs: A Senior Leader Reference Handbook, 2011-2012 Apr 19 2022 The U.S. Army War College (USAWC) is proud to present the 28th Edition of How the Army Runs: A Senior Leader Reference Handbook, 2011-2012. Publication of this text at this time, when the Army has been at war for almost a decade, has almost completed restructuring of its operating force, and is addressing the structure of the generating force, as well as completing formidable base closure and restationing actions, gives credence to the enduring truth that in order to be successful the Army must sustain and improve itself while it is fully committed to the Nation's bidding. The systems and processes documented and explained in this work are designed to do just that. This text was prepared under the direction of the faculty of the Department of Command, Leadership, and Management. It is intended to be used in an academic environment during the study of the systems and processes used to develop and sustain trained and ready combat forces to be used by the Combatant Commanders.

Conjuring Freedom Feb 17 2022 Conjuring Freedom: Music and Masculinity in the Civil War's "Gospel Army" analyzes the songs of the 1st South Carolina

Volunteers, a regiment of Black soldiers who met nightly in the performance of the ring shout. In this study, acknowledging the importance of conjure as a religious, political, and epistemological practice, Johari Jabir demonstrates how the musical performance allowed troop members to embody new identities in relation to national citizenship, militarism, and masculinity in more inclusive ways. Jabir also establishes how these musical practices of the regiment persisted long after the Civil War in Black culture, resisting, for instance, the paternalism and co-optive state antiracism of the film *Glory*, and the assumption that Blacks need to be deracinated to be full citizens. Reflecting the structure of the ring shout--the counterclockwise song, dance, drum, and story in African American history and culture--*Conjuring Freedom* offers three new concepts to cultural studies in order to describe the practices, techniques, and implications of the troop's performance: (1) Black Communal Conservatories, borrowing from Robert Farris Thompson's "invisible academies" to describe the structural but spontaneous quality of black music-making, (2) Listening Hermeneutics, which accounts for the generative and material affects of sound on meaning-making, and (3) Sonic Politics, which points to the political implications of music's use in contemporary representations of race and history.

The Army of Afghanistan Jan 04 2021 This book is the first full length political history of the Afghan Army, and as such is unparalleled in the range and depth of its analysis of this vitally important institution. Giustozzi locates the Army's development within the wider context of state-building in Afghanistan. His volume includes a brief survey of the period to 1953, but focuses mainly on subsequent developments, over the last four decades, as the officer corps began to be politicised and later factionalised, especially during the Russian-backed regime of the Communist People's Democratic Party of Afghanistan (PDPA), which ruled the country from 1978 to 1992. Despite the stress on the politics of praetorianism, the volume describes the Afghan Army's performance on the battlefield in detail, highlighting the potential contradiction between military effectiveness and political loyalty to the ruling elite. The volume covers developments to the end of 2013 and is the result of extensive interviews conducted with both Afghan Army officers and their advisers and mentors.
