The Dissolution of the Colonial Empires Dec 14 2020 First published in 1989. On the eve of the First World War, almost 72 million square kilometres of territory and more than 560 million people were under colonial rule. By 1980 the European colonial empires had disappeared from the map. Concentrating in particular on the British Commonwealth and the French colonial empire, the author shows how economic and political changes in the mother countries, the awakening national consciousness of the African and Asian peoples, and the effects of two World Wars had all compelled Europe to decolonize. He argues that although a satisfactory new order in world politics and the global economy has not been achieved in the process, the dissolution of the empires came about with remarkably little bloodshed, thereby laying a solid foundation for the future. The author concludes by looking at the legacy of the decolonized world in the late 1980s. He examines the last bastion of European colonial domination (South Africa) and discusses the emerging new North-South relations.

The Dissolution of Monasteries Dec 26 2021 The current volume offers a comparative approach to the study of the dissolution of monasteries in Scandinavia. In a Northern European context the Danish reformation has often been portrayed as uncompromising, and yet the dismantling of the monasteries in Denmark was neither easy, nor a fast process. The last Danish monastery was not closed down until 1621. In other words, the central question is why it took so long? Theologians of Wittenberg were clear on the matter of the monasteries. As a consequence, the task of closing them down was transferred to lay authorities. The process was further complicated by close relations between monasteries, princes, and noble families who had often contributed in establishing the monasteries. Power balances among these parties changed over time and they varied depending on state and government. Religious orders equally played a part in this process. Despite the many differences, more general patterns can still be traced. This volume addresses the above themes of variation and general patterns. The essays are authored by scholars from a number of disciplines and nationalities, and are based on a wide range of sources. They are the outcome of an International conference held at the Centre for Medieval and Renaissance Studies, University of Southern Denmark to mark the 500th Anniversary of the Reformation.

Dissolution of Marriage with Element for Strangeness Jan 03 2020 The crumbling of marriage incorporates rules for the evacuation, deterioration and end of the private affiliation. A part that merits special thought in the worldwide classified guideline is the range of a few affiliations. We consolidate here both intimate affiliations, and besides associations of couples that exist in another controlled design or even as direct truth relationship, without legitimate verbalization. Assortment is valuable given that the rules are clear and meet the overall examples. The patrimonial effects and the non-patrimonial effects of the genuine associations in overall couples need rules as per the rising of the new genuine variables, challenged, constantly, with the security standards of the fundamental normal opportunity.

The Development of the Process for the Dissolution Jun 27 2019 The doctrine that the Church has the power to dissolve, under certain conditions, any non-sacramental marriage underwent significant changes throughout centuries. This development illustrates growing self-awareness of the Church in this matter. The whole issue is complex and sensitive because the main motive for application of this power is always the good of the faith and the salvation of the soul. Generally speaking, the self-awareness of the Church about her power has developed during a very long period of time. The first action over a marriage of two unbaptized persons comes with the counsel of St. Paul the Apostle and subsequent development of the doctrine about the Pauline Privilege. Consequently the study shows the development of this concession from that time until the current time. The main purpose was to offer, in a systematic way, an analysis of the actual legislation on the dissolution of marriage in favorem fidei, supported by wide historical background, without which it would be difficult to understand and apply the current Norms.

Dissolution of the Veil Sep 30 2019 Dr. Paul Noar, an Tri-Consortium Prize Recipient for Advance Research in Recombination, and Dr. Lea Weathers, a young and brilliant biogeneticist, embark on a search for the answer to DNA abnormalities found in recent victims of suicide. Noar, unknown to Weathers, has uncovered the catalyst for the genetic changes that have lead to this growing trend. After years of examining declassified government files, he discovers a small-scale biological experiment with cataclysmic potential. He has enlisted her help to verify his findings. What Weathers believes to be a widespread mutation is actually the result of a unique, multigenerational study, that has culminated in the dissolution of the veil between the conscious and subconscious minds of a limited number of targets. Veil Theory, nontraditional scientific speculation on the relationship between the conscious and subconscious mind, is thrown into the mainstream when the offspring of the victims begin to display prescience. Unfortunately, the money behind the madness belongs to two powerful men determined to own what could be the key to immortality. Neland Gatti, past Desert Storm and Desert Fog consultant, directs the lab used by Noar in his investigation into discarded government research. Gatti plays the end game and values only the outcomes he can command. A cold and calculating chemist, he seizes the opportunity to have the government fund his research by promising the delivery of a new chemical tool for its use. He has not been able to repeat past successes and this early pinnacle drives him over the edge in his attempt to achieve control of time through his most recent find, the Alys-1 Project. Cameron Brooks is owner of the Brooks Agency and son of the late Marion Brooks. His fathers company developed the original Alys-1 formula for the Department of Defense. It was shelved in favor of LSD and mind-control. Thirty years later, Noar uncovers documents relating to the experiment and Cameron Brooks takes notice, as does Gatti. But Brooks has the edge. He is also in possession of a list of children, offspring of the original test group who have begun to mutate and die. Over the years he has manipulated the lives of three of these children. A perverse soul, his twisted personality has created sadistic killers of twin boys, soon to be affected by the mutation. They do his bidding as he directs the actions and discoveries of Noar. Within six months of her enlistment, Weathers discovers Noars secret files. She learns that Gatti has given Noar false information and tainted his findings. When she reveals this to Noar, in the presence of Gatti, Noar is exposed. He must escape the secret base, where the experimentation has been conducted, and flee to Cameron Brooks. Dissolution of the Veil becomes a race to find the true formula, and understand its veridical potential before the mutations bend their hosts toward suicide. It is a competition confused by altered time and displaced reality as the victim experiences past identities and fluid futures. Veil Theory has become a dangerous fact which threatens the structure of society and the stability of the world. The author.

Memory and the Dissolution of the Monasteries in Early Modern England Aug 02 2022 Explores the seismic impact of the dissolution of the monasteries, offering a new perspective on the English Reformation.

The Dissolution of the Monasteries Jan 27 2022 Originally published in 1971 this book begins with the assumption that the Dissolution of the Monasteries was neither an integral nor an essential part of the English reformation. This book pursues the story chronologically and thus helps students re-discover what contemporaries knew was happening at each successive stage. An important part of this process consists in watching - with the help of a selection of surviving records - how the Court of Augmentation went to work not only centrally but in the field. The part played by Thomas Cromwell, in both the devising and the carrying out of the Dissolution is reassessed and particular attention is paid to the chronological relation between his career and the early stages of the dispersal of the crown's new resources among the King's subjects.

The Anodic Dissolution of Molybdenum in Acid Sulfate Solutions Aug 29 2019 "The world's resources of metals are decreasing. Due to this and the cost of replacing corroded materials, it has come to be realized that prevention is better than cure. The increasing demand for molybdenum and molybdenum alloys has stimulated a great amount of research into the corrosion characteristics of these materials. The result of such research has assisted in the development of suitable molybdenum alloys and protective coatings to retard corrosion. When a molybdenum anode and a suitable cathode are immersed in an oxygen-free electrolyte and are connected to a direct current power source, molybdenum is dissolved. This process is called anodic dissolution and a study of it is useful for many reasons: (1) The apparent valence of the metal undergoing dissolution can be determined. (2) An empirical expression for the dissolution rate can be established. (3) A dissolution reaction mechanism can be hypothesized that may aid in retarding corrosion and predicting behavior in other environments. The mechanism of the anodic dissolution of molybdenum has been formulated only in very vague terms. The purpose of this investigation was to study the dissolution in sulfuric acid solutions of various pH and if possible to establish a mechanism consistent with the data. Toward this end, experiments were performed to determine the relationships between the current density, potential, pH, and faradaic efficiency during dissolution. The effect of chloride ion on the process was also determined"-- Introduction, leaf 1.

A History of English Philanthropy Jun 07 2020 First published in 1905, this book charts the history of English philanthropy from the Elizabethan period through to the nineteenth century. In doing so, Benjamin Kirkman Gray posed some important questions about modern philanthropy, and reflected on the meaning and worth of philanthropy. Through historical study, the author discussed this complex question, which, in a time before the development of the British welfare state, was particularly topical. This book will be of interest to those studying the history of philanthropy, social welfare and poverty.

The Dissolution of Czechoslovakia Feb 13 2021 *Includes pictures *Includes a bibliography for further reading On New Year's Day 1993, Czechoslovakia broke into two separate countries, the Czech Republic and Slovakia. Thus ended one of the creations brought about by the Treaty of Versailles after World War I, and as a country that had existed for just under 75 years, Czechoslovakia spent most of its time under the tyranny of fascism or communism. Of course, the country's origins go back far longer than the 1910s, and they were complex and convoluted. The very geography of central Europe meant this territory had been conquered and occupied many times over the course of history, and for much of the modern era, the area belonged to much larger empires, including the Holy Roman Empire, the Austrian Habsburg Empire, and finally the Austro-Hungarian Empire. Nevertheless, two distinct ethnicities had come to make up the bulk of the territory's inhabitants: the Czechs, predominantly in the areas of Bohemia and Moravia, and the Slovaks, in Slovakia. Both peoples had their own Slavic-based languages, but the languages were similar enough to be mutually intelligible. Despite any ethnic similarities, the country that formed in 1918 among the ashes of the Austro-Hungarian Empire was by no means a "nation-state" as most people understand that term. In fact, much of the territory which bordered Germany was inhabited by ethnic German speakers, including one of Prague's most famous sons, the writer Franz Kafka. One of the 20th century's most celebrated authors spoke German as his first language. As such, the lands that became Czechoslovakia had usually existed in some kind of supranational system where identity was allowed to be relatively fluid. Czechoslovakia would also play a crucial role in bringing about World War II, a sign that the area's nationalism, which ultimately split Czechoslovakia apart in 1993, had long spelled danger in a place where so many groups competed for power. The presence of German speakers would serve as a pretext for Hitler's acquisition of the Sudetenland, creating a crisis ahead of history's deadliest war and serving as a harbinger of things to come. *The Dissolution of Czechoslovakia: The History of the Central European Nation from Its Founding to Its Breakup* examines how the multicultural nation was founded, the inherent tensions there, and how it eventually came apart. Along with pictures of important people and places, you will learn about Czechoslovakia like never before.

Cellulose Oct 31 2019 Cellulose is destined to play a major role in the emerging bioeconomy. Awareness of the environment and a depletion of fossil fuels are some of the driving forces for looking at forest biomaterials for an alternative source of energy, chemicals and materials. The importance of cellulose is widely recognized world-wide and as such the field of cellulose science is expanding exponentially. Cellulose, the most abundant biopolymer on earth, has unique properties which makes it an ideal starting point for transforming it into useful materials. To achieve this, a solid knowledge of cellulose is essential. As such this book on cellulose, the first in a series of three, is very timely. It deals with fundamental aspect of cellulose, giving the reader a good appreciation of the richness of cellulose properties. Book *Cellulose - Fundamental Aspects* is a good introduction to books *Cellulose - Medical, Pharmaceutical and Electronic Applications* and *Cellulose - Biomass Conversion*, in which applications of cellulose and its conversion to other materials are treated.

A Companion to Spinoza Feb 02 2020 An unparalleled collection of original essays on Benedict de Spinoza's contributions to philosophy and his enduring legacy *A Companion to Spinoza* presents a panoramic view of contemporary Spinoza studies in Europe and across the Anglo-American world. Heinrich Brüning and the Dissolution of the Weimar Republic Aug 10 2020 Scholars have long debated whether Heinrich Brüning, head of the German government from 1930 to 1932, was the 'last democratic chancellor' of the Weimar Republic or the trailblazer of the Nazi dictatorship. His memoirs (published in 1970) damaged his reputation badly by terming the restoration of monarchy the 'crux' of his policies. This 1998 book is the first scholarly biography of Brüning in any language and offers a systematic analysis of the economic, social, foreign, and military policies of his cabinet as it sought to cope with the Great Depression. With the help of newly available sources, it clarifies the peculiar distortions in the memoirs, showing that Chancellor Brüning intended to restore parliamentary democracy intact when the economic crisis passed. He was curbing the Nazi menace successfully when President Hindenburg, reactionary landowners, and army generals eager for massive rearmament made the disastrously misguided decision to topple him.

The Dissolution of Place Jul 01 2022 Postmodern architecture - with its return to ornamentality, historical quotation, and low-culture kitsch - has long been seen as a critical and popular anodyne to the worst aspects of modernist architecture: glass boxes built in urban locales as so many

interchangeable, generic anti-architectural cubes and slabs. This book extends this debate beyond the modernist/postmodernist rivalry to situate postmodernism as an already superseded concept that has been upended by deconstructionist and virtual architecture as well as the continued turn toward the use of theming in much new public and corporate space. It investigates architecture on the margins of postmodernism -- those places where both architecture and postmodernism begin to break down and to reveal new forms and new relationships. The book examines in detail not only a wide range of architectural phenomena such as theme parks, casinos, specific modernist and postmodernist buildings, but also interrogates architecture in relation to identity, specifically Native American and gay male identities, as they are reflected in new notions of the built environment. In dealing specifically with the intersection between postmodern architecture and virtual and filmic definitions of space, as well as with theming, and gender and racial identities, this book provides provides ground-breaking insights not only into postmodern architecture, but into spatial thinking in general.

Elizabeth Bowen and the Dissolution of the Novel Oct 12 2020 Elizabeth Bowen and the Dissolution of the Novel argues that the Anglo- Irish writer Elizabeth Bowen (1899-1973) is one of the most important, though undervalued, practitioner of the twentieth-century novel in English. This is an innovative study with significant implications for contemporary critical and theoretical writing. The authors contend that Bowen's work calls for a radically new conception of criticism and theory - and of the novel itself.

The Dissolution of Yugoslavia and the Badinter Arbitration Commission May 07 2020 This title was first published in 2000: Yugoslavia's dissolved at a time when rhetoric of the New World Order was firmly established in legal and political discourse. Nevertheless, the largely positive appraisal of international law's response to the Iraq - Kuwait conflict has not been mirrored in relation to Yugoslavia. This book evaluates the peace-making efforts of the major institutional actors, whilst focusing specifically on the Badinter Arbitration Commission, an ad hoc EC-created organ required to provide legal advice on the issues surrounding Yugoslavia's dissolution. Initially composed of constitutional lawyers, aiming to redraft Yugoslavia's constitution, the Commission soon faced problems of public international law. Its' jurisprudence challenges international lawyers to reassess their state-centric conceptions of international law in a world where most conflicts, war crimes and human-rights abuses exist within rather than between States. This book is vital reading for anyone interested in international law, international relations, politics and central/eastern European studies.

The Dissolution of the Monasteries Nov 24 2021 The first account of the dissolution of the monasteries for fifty years—exploring its profound impact on the people of Tudor England Shortly before Easter, 1540 saw the end of almost a millennium of monastic life in England. Until then religious houses had acted as a focus for education, literary, and artistic expression and even the creation of regional and national identity. Their closure, carried out in just four years between 1536 and 1540, caused a dislocation of people and a disruption of life not seen in England since the Norman Conquest. Drawing on the records of national and regional archives as well as archaeological remains, James Clark explores the little-known lives of the last men and women who lived in England's monasteries before the Reformation. Clark challenges received wisdom, showing that buildings were not immediately demolished and Henry VIII's subjects were so attached to the religious houses that they kept fixtures and fittings as

souvenirs. This rich, vivid history brings back into focus the prominent place of abbeys, priories, and friaries in the lives of the English people.
