A Case for the Case Study Nov 24 2021 Since the end of World War II, social science research has become increasingly quantitative in nature. A Case for the Case Study provides a rationale for an alternative to quantitative research: the close investigation of single instances of social phenomena. The first section of the book contains an overview of the central methodological issues involved in the use of the case study method. Then, well-known scholars describe how they undertook case study research in order to understand changes in church involvement, city life, gender roles, white-collar crimes, family structure, homelessness, and other types of social experience. Each contributor confronts several key questions: What does the case study tell us that other approaches cannot? To what extent can one generalize from the study of a single case or of a highly limited set of cases? Does case study work provide the basis for postulating broad principles of social structure and behavior? The answers vary, but the

consensus is that the opportunity to examine certain kinds of social phenomena in depth enables social scientists to advance greatly our empirical understanding of social life. The contributors are Leon Anderson, Howard M. Bahr, Theodore Caplow, Joe R. Feagin, Gilbert Geis, Gerald Handel, Anthony M. Orum, Andree F. Sjoberg, Gideon Sjoberg, David A. Snow, Ted R. Vaughan, R. Stephen Warner, Christine L. Williams, and Norma Williams.

Contrastive Analysis of English and Polish Surveying Terminology Jul 09 2020 This book, with a focus on English and Polish, is a study of surveying terminology, which may be considered as an under-researched area when compared to legal, medical or business terminologies. It examines differences between terms and concepts in the two languages. The purpose of the book is three-fold: firstly, to investigate how surveying terms are created and how they are named in English and Polish; secondly, to analyse concept systems of the two languages with respect to surveying terminology; and thirdly, to indicate the areas of surveying in which terminological and conceptual differences occur, the factors that trigger them and translation strategies which are used to solve them.
