Designing a Sustainable Financial System Feb 09 2021 This edited collection brings together leading theoretical and applied research with the intent to design a sustainable global financial future. The contributors argue that our world cannot move toward sustainability, address climate change, reverse environmental degradation, and improve human well-being without aligning the financial system with sustainable development goals like those outlined by the United Nations. Such a system would: a) be environmentally and socially responsible; b) align with planetary boundaries; c) manage natural resources sustainably; d) avoid doing more harm than good; and e) be resilient and adaptable to changing conditions. The overarching theme in this collection of chapters is a response to the worldwide, supranational sustainable finance discussions about how we can transition to a new socio-ecological system where finance, human well-being, and planetary health are recognized as being highly intertwined.

Yearbook of Experts, Authorities & Spokespersons - 2011 Edition Jun 25 2022 Yearbook of Experts is America's favorite newsroom resource -- requests by tens of thousands of journalists.

Plunkett's Automobile Industry Almanac 2008 Feb 27 2020 The automobile industry is evolving rapidly on a worldwide basis. Manufacturers are merging, component design and manufacture are now frequently outsourced instead of being created in-house, brands are changing and the giant auto makers are expanding deeper into providing financial services to car buyers. The skyrocketing price of gas spurs developments in hybrid technology and clean diesel, as manufacturers look for ways to improve fuel efficiency. Meanwhile, all of the biggest, most successful firms have become totally global in nature. Plunkett's Automobile Industry Almanac will be your complete guide to this immense, fascinating industry. On the car dealership side, giant, nationwide holding companies have acquired the best dealers in major markets. Even the used car business is being taken over by national chains. E-commerce is having profound effects on the car industry. Consumers use the Internet to become better informed before making a purchase. Online sites like Autobytel steer millions of car buyers toward specific dealers while the same sites deliver competing bids for cars, insurance and financing in a manner that lowers costs and improves satisfaction among consumers. Meanwhile, auto makers are using the latest in e-commerce methods to manage their supply chains and replenish their inventories. This exciting new book (which includes a database on CD-ROM) is a complete reference tool for everything you need to know about the car, truck and specialty vehicles business, including: Automotive industry trends and market research; Mergers, acquisitions, globalization; Automobile manufacturers; Truck makers; Makers of specialty vehicles such as RVs; Automobile loans, insurance and other financial services; Dealerships; Components manufacturers; Retail auto parts stores; E-commerce; and much, much more. You'll find a complete overview, industry analysis and market research report in one superb, value-priced package. This book also includes statistical tables, an automobile industry glossary, industry contacts and thorough indexes. The corporate profile section of the book includes our proprietary, in-depth profiles of the 400 leading companies in all facets of the automobile industry. Purchasers may also receive a free copy of the company profiles database on CD-ROM.

Smart and Green Solutions for Civil Infrastructures Incorporating Geological and Geotechnical Aspects Oct 29 2022 Advancement in design and construction to embrace the impact of rapid global urbanization growth in infrastructure development is inevitable. This proceedings volume includes many smart and green solutions for civil infrastructures, incorporating geotechnical and engineering geology aspects. The articles presented in this volume are attempts made by the researchers and practitioners to address many geotechnical challenges, based on the state-of-the-art practices, innovative technologies, new research results and case histories in construction and design towards safer and cost effective infrastructures. This volume covers a wide range of topics with direct relevance to people within the broad field of geomechanics, including consultants, contractors, academics, materials suppliers and the owners and operators of civil infrastructures. Many papers associated with numerical modeling of transport infrastructure, advanced soil and rock testing, field monitoring, tunnelling, expansive soils, geo-center motion, triaxial and dynamic testing, piles etc. are included. The content is based on the contributions to the 6th GeoChina International Conference on Civil & Transportation Infrastructures: From Engineering to Smart & Green Life Cycle Solutions -- Nanchang, China, 2021.

Natural and Engineered Solutions for Drinking Water Supplies Dec 07 2020 Illuminating opportunities to develop a more integrated approach to municipal water system design, *Natural and Engineered Solutions for Drinking Water Supplies: Lessons from the Northeastern United States and Directions for Global Watershed Management* explores critical factors in the decision-making processes for municipal water system delivery. The book offers vital insights to help inform management decisions on drinking water supply issues in other global regions in our increasingly energy- and carbon-constrained world. The study evaluates how six cities in the northeastern United States have made environmental, economic, and social decisions and adopted programs to protect and manage upland forests to produce clean drinking water throughout their long histories. New York, New York; Boston and Worcester, Massachusetts; New Haven and Bridgeport, Connecticut; and Portland, Maine have each managed city watersheds under different state regulations, planning and development incentives, biophysical constraints, social histories, and ownerships. Some of the overarching questions the book addresses relate to how managers should optimize the investments in their drinking water systems. What is the balance between the use of concrete/steel treatment plants (gray infrastructure) and forested/grassland/wetland areas (green infrastructure) to protect surface water quality? The case studies compare how engineered and/or natural systems are employed to protect water quality. The conclusions drawn establish that it makes environmental, economic, and social sense to protect and manage upland forests to produce water as a downstream service. Such stewardship is far more preferable than developing land and using engineering, technology, and artificial filtration as a solution to maintaining clean drinking water. Lessons learned from this insightful study provide effective recommendations for managers and policymakers that reflect the scientific realities of how forests and engineering can be best integrated into effective watershed management programs and under what circumstances.

International Advances in Writing Research Apr 30 2020 The authors report research that considers writing in all levels of schooling, in science, in the public sphere, and in the workplace, as well as the relationship among these various places of writing. The authors also consider the cultures of writing—among them national cultures, gender cultures, schooling cultures, scientific cultures, and cultures of the workplace.

Handbook of Bioenergy Crops Jul 14 2021 Biomass currently accounts for about fifteen per cent of global primary energy consumption and is playing an increasingly important role in the face of climate change, energy and food security concerns. *Handbook of Bioenergy Crops* is a unique reference and guide, with extensive coverage of more than eighty of the main bioenergy crop species. For each it gives a brief description, outlines the ecological requirements, methods of propagation, crop management, rotation and production, harvesting, handling and storage, processing and utilization, then finishes with selected references. This is accompanied by detailed guides to biomass accumulation, harvesting, transportation and storage, as well as conversion technologies for biofuels and an examination of the environmental impact and economic and social dimensions, including prospects for renewable energy. This is an indispensable resource for all those involved in biomass production, utilization and research.

Proceedings of the 4th International Congress of Automotive and Transport Engineering (AMMA 2018) Nov 06 2020 This volume includes selected and reviewed papers from the 4th International Congress of Automotive and Transport Engineering, held in Cluj, Romania, in September 2018. Authors are experts from research, industry and universities coming from 14 countries worldwide. The papers are covering the latest developments in automotive vehicles and environment, advanced transport systems and road traffic, heavy and special vehicles, new materials, manufacturing technologies and logistics, accident research and analysis and innovative solutions for automotive vehicles. The conference is organized by SIAR (Society of Automotive Engineers from Romania) in cooperation with FISITA.

New York Magazine Oct 25 2019 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country. With award-winning writing and photography covering everything from politics and food to theater and fashion, the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself, while celebrating New York as both a place and an idea.

Organic Housekeeping Jun 01 2020 Longing for a kinder, gentler world? As the old saying goes, everything begins at home, and odds are, if you live in the all-American household, the air inside is more toxic than the air outside, even if you live in the most polluted of cities. You regularly handle the filthiest object in your home -- the kitchen sponge -- and put the same chemicals on your face that are used in brake fluid and antifreeze. The cleaning agents and personal care products commonly marketed to and used in American homes contain not only some very dangerous, toxic chemicals, but they also create an "overly clean," chemically bombed-out house that compromises immune systems. And with more than fifty million Americans suffering from allergies and other autoimmune diseases -- not to mention the developing and fragile immune systems of children and seniors -- large numbers of people are actually being made sicker and sicker by their homes. Learn to live a clean, healthy, more economical way with Ellen Sandbeck, the nontoxic avenger. In this must-have book for the twenty-first-century home, this passionate, witty advocate of all things organic will teach you how to maintain every part of the home -- from living room to septic tank, kitchen floor to bathroom sink -- using safe, simple cleansers and quick preventative measures as well as the most effective organic products on the market to get the job done. Learn time-saving, preventative housekeeping, such as taking thirty seconds to clean the shower while you shower. Take care of bathroom stains with baking soda and vinegar rather than commercial, toxic bathroom "bombs" peddled to you with such force by manufacturers. Need whiter whites? There is no bleaching power on earth stronger than the sun. Snow clean your fine rugs. Choose fruits and vegetables from the relatively pesticide residue-free list. Clean felt-tipped pen stains with vodka. Make furniture shine with olive oil and lemon. Your house will also smell as great as it looks.

Bright Green Future: How Everyday Heroes Are Re-Imagining the Way We Feed, Power, and Build Our World Nov 25 2019 Bright Green Future chronicles a renaissance at the edge of a crisis. As climate change shifts our planet towards an uncertain future, a movement of unlikely heroes are building a blueprint for a better world. It's a world where clean power grows wealth for local communities, resources regenerate themselves, city planning is driven by the people, and healthy soil is our greatest asset. These changemakers have opened a gateway for ordinary people to begin imagining and building the bright future we deserve.

How to Finance Energy Management Projects; Solving the "Lack of Capital Problem" May 24 2022 The landscape for implementing energy efficiency projects is rapidly changing, and the need for energy project financing has never been greater. The purpose of this book is to examine the key factors which typically lead to success when structuring financing options for a proposed energy project and getting it approved by top management. You'll find the information you'll need to explore as many financing options as possible, as well as the tools required to make a comprehensive financial analysis of your project. You'll learn about the most effective financing strategies for getting more projects implemented, including such options as performance contracts, power purchase agreements, PACE financing, and others, along with feedback on specific strategies which have been successfully used by others to present projects and get them approved.

Death Benefit Oct 17 2021 Death Benefit is an explosive thriller from New York Times bestselling author and master of the medical thriller Robin Cook. Pia Grazdani is an exceptional yet aloof medical student working closely with Columbia University Medical Center's premier scientist. Their cutting edge research could revolutionize health care; creating replacement organs. Thorough her work with the brilliant molecular geneticist Dr Tobias Rothman, Pia knows she will not only be given the chance to fulfill her professional ambitions -- but also maybe finally all push aside memories of her difficult, abusive childhood. However, tragedy strikes in the lab. Pia, with the help of infatuated classmate George Wilson, launches an investigation into the unforeseen calamity in the hospital's supposedly secure biosafety lab. Meanwhile, two ex-Wall Street whiz-kids think they have found another lodestone in the nation's multi-trillion dollar life insurance industry, and race to find ways to control the data -- and make a killing. And as Pia and George dig deeper into the events at the lab, matters become increasingly suspicious . . .

America's Fifth Column Oct 05 2020 President Barack Obama promised that his administration would fundamentally transform America. A tenet of this book is that leftists and fifth columnists have been fundamentally transforming the United States for more than a century. Apparently, they believe that America's capitalist system and democratic form of governance should be replaced with socialism. They have community organized, spied, agitated, obfuscated, taxed, committed voter fraud, and incited class warfare to weaken and polarize the country. Transformation started as a ripple of collectivism during the tenures of Teddy Roosevelt and Woodrow Wilson, gained momentum during the socialistic administrations of FDR and LBJ, and has become a

tsunami in the Obama years. Even worse, changes on the horizon make it a near certainty that liberals will dominate elections after the midpoint of the 21st century. This book examines the wages of liberalism, including injurious ideological environmentalism, unfair taxes, stultifying political correctness, and incompetence and corruption in government.

Drawdown Jul 02 2020 NEW YORK TIMES BESTSELLER For the first time ever, an international coalition of leading researchers, scientists and policymakers has come together to offer a set of realistic and bold solutions to climate change. All of the techniques described here - some well-known, some you may have never heard of - are economically viable, and communities throughout the world are already enacting them. From revolutionizing how we produce and consume food to educating girls in lower-income countries, these are all solutions which, if deployed collectively on a global scale over the next thirty years, could not just slow the earth's warming, but reach drawdown: the point when greenhouse gasses in the atmosphere peak and begin to decline. So what are we waiting for?

Human Resource Management Practices for Promoting Sustainability Apr 11 2021 In the midst of climate change, responsible business practices and ecological modernization become essential tools for the promotion of sustainability. Due to the current level of demand for eco-friendly products and services, there is a need for green training and green human resource development to support green creativity and eco-innovation for sustainability. By incorporating green initiatives into human resource practices, organizations can maintain a positive impact on the environment. With a full understanding of sustainable business practices, positive impacts on the environmental management field become easier to produce. Human Resource Management Practices for Promoting Sustainability is a pivotal reference source that explores the incorporation of green initiatives into all aspects of human resource management practices in a variety of industries. The book delivers a discussion on green human capital, collective green intelligence, and competencies that are essential to cope with the challenges in Industry 4.0. It also provides a basis for green recruitment and selection processes as a way of promoting pro-environmental behavior in the labor markets. While highlighting a broad range of topics including employee relations, knowledge management, and recruitment, this book is ideally designed for executives, entrepreneurs, human resource managers, academicians, researchers, and students. The book is also suitable for conventional and corporate universities looking to meet sustainable development goals as well as policymakers as it provides a guideline in designing and implementing green creativity and eco-innovation based on a wide range of global issues confronting sustainability in the Fourth Industrial Revolution.

Recycling from Waste in Fashion and Textiles Aug 03 2020 The alarming level of greenhouse gases in the environment, fast depleting natural resources and the increasing level of industrial effluents, have made every single manufacturing activity come under the scrutiny of sustainability. When all kinds of waste such as clothes, furniture, carpets, televisions, shoes, paper, food wastes etc. end up in the landfill, only a few of them are naturally decomposed and thus a large majority remains as non-biodegradable. It is for this reason, efforts are concentrated to reduce the burden on earth by this waste, and as far as used textile products are concerned, there are now attempts to recycle or up-cycle. This book addresses the role of sustainability by using textile waste in fashion and textiles with respect to manufacturing, materials, as well as the economic and business challenges and opportunities it poses. This wide-ranging book comprises 19 chapters on the various topics including: · Solutions for sustainable fashion and textile industry · Agro and bio waste in the fashion industry · Innovating fashion brands by using textile waste · Waste in handloom textiles · Business paradigm shifting: 21st century fashion from recycling and upcycling · Utilization of natural waste for sustainable textile coloration · Circular economy in fashion and textile from waste · Future pathways of waste utilization for fashion · Sustainable encapsulation of natural dyes from Plant waste for textiles · Agro-waste applications for bio-remediation of textile effluent
