Demonstration of Remote Monitoring Technology for Cathodic Protection Systems, Phase II Jun 17 2019 Cathodic protection (CP) is used to prevent corrosion on many buried and submerged metallic structures such as underground pipes and tanks. Periodic testing is required to ensure proper CP system operation, but many Directorates of Public Works (DPWs) do not have sufficient resources to conduct such tests regularly. Several companies have begun manufacturing remote monitoring units (RMUs) for CP systems. The technology allows

personnel to monitor multiple CP systems from a central location so problems can be detected and repaired immediately. RMUs from three manufacturers were evaluated during Phase I of this study (FEAP TR 97/76) to determine their effectiveness. Only one of them performed successfully. During Phase II, RMUs from two additional manufacturers were evaluated. Results showed that both of the systems from Phase II performed successfully and are suitable for use at Army installations.

Supply Chain Risk Sep 20 2019 The impact of technological change, globalization, information and communication technologies and international governmental intervention has radically altered supply chain strategies, operations and risk profiles for most organizations. The challenge facing business and researchers alike is how best to address risk management in this new context. This collection, written by international scholars from the UK, US and Scandinavia, addresses this need by providing the first topical review of these developments and the latest research findings. The findings represent a robust cross-disciplinary view of supply chains, articulating policies and strategies for organizations. The research studies are based on empirical case studies within services and manufacturing in both large and SME organizations. This work is intended to provide the foundation for future research in this expanding area and the impact it has on managing risk within the supply chain.

The Global English Style Guide Jul 11 2021 The Global English Style Guide illustrates how much you can do to make written texts more suitable for a global audience. Accompanied by an abundance of clearly explained examples, the Global English guidelines show you how to write documentation that is optimized for non-native speakers of English, translators, and even machine-translation software, as well as for native speakers of English. You'll find dozens of guidelines that you won't find in any other source, along with thorough explanations of why each guideline is useful. Author John Kohl also includes revision strategies, as well as caveats that will help you avoid applying guidelines incorrectly. Focusing primarily on sentence-level stylistic issues, problematic grammatical constructions, and terminology issues, this book addresses the following topics: ways to simplify your writing style and make it consistent; ambiguities that most writers and editors are not aware of, and how to eliminate those ambiguities; how to make your sentence

structure more explicit so that your sentences are easier for native and non-native speakers to read and understand; punctuation and capitalization guidelines that improve readability and make translation more efficient; and how language technologies such as controlled-authoring software can facilitate the adoption of Global English as a corporate standard. This text is intended for anyone who uses written English to communicate technical information to a global audience. Technical writers, technical editors, science writers, and training instructors are just a few of the professions for which this book is essential reading. Even if producing technical information is not your primary job function, the Global English guidelines can help you communicate more effectively with colleagues around the world. This book is part of the SAS Press program.
