The Last Mile in Ending Extreme Poverty Nov 22 2019 Viewed from a global scale, steady progress has been made in reducing extreme poverty—defined by the \$1.25-a-day poverty line—over the past three decades. This success has sparked renewed enthusiasm about the possibility of eradicating extreme poverty within a generation. However, progress is expected to become more difficult, and

slower, over time. This book will examine three central changes that need to be overcome in traveling the last mile: breaking cycles of conflict, supporting inclusive growth, and managing shocks and risks. By uncovering new evidence and identifying new ideas and solutions for spurring peace, jobs, and resilience in poor countries, *The Last Mile in Ending Extreme Poverty* will outline an agenda to inform poverty reduction strategies for governments, donors, charities, and foundations around the world. Contents Part I: Peace: Breaking the Cycle of Conflict External finance for state and peace building, Marcus Manuel and Alistair McKechnie, Overseas Development Institute Reforming international cooperation to improve the sustainability of peace, Bruce Jones, Brookings and New York University Bridging state and local communities through livelihood improvements, Ryutaro Murotani, JICA, and Yoichi Mine, JICA-RI and Doshisha University Postconflict trajectories and the potential for poverty reduction, Gary Milante, SIPRI Part II: Jobs: Supporting Inclusive Growth Structural change and Africa's poverty puzzle, John Page, Brookings Public goods for private jobs: lessons from the Pacific, Shane Evans, Michael Carnahan and Alice Steele, Department of Foreign Affairs and Trade, Government of Australia Strategies for inclusive development in agrarian Sub-Saharan countries, Akio Hosono, JICA-RI The role of agriculture in poverty reduction, John McArthur, Brookings, UN Foundation, and Fung Global Institute Part III: Resilience: Managing Shocks and Risks Environmental stress and conflict, Stephen Smith, George Washington University and Brookings Toward community resilience: The role of social capital after disasters, Go Shimada, JICA-RI Social protection and the end of extreme poverty, Raj Desai, Georgetown University and Brookings

Paper-based Diagnostics Mar 07 2021 This book explores the status of paper-based diagnostic solutions, or Microfluidics 2.0. The contributors explore: how paper-based tests can be widely distributed and utilized by semi-skilled personnel; how close to commercial applications the technology has become, and what is still required to make paper-based diagnostics the game-changer it can be. The technology is examined through the lens of the World Health Organization's ASSURED criteria for low-resource countries (Affordable, Sensitive, Specific, User-friendly, Rapid and robust, Equipment-free, and Deliverable to end-users). Its applications have to include: health technology, environmental technology, food safety, and more. This book is appropriate for researchers in these areas, as well as those interested in microfluidics, and includes chapters dedicated to principles such as theory of flow and surface treatments; components such as biomarkers and detection; and current methods of manufacturing. Discusses how paper-based diagnostics can be used in developing countries by comparing current diagnostic tests with the World Health Organization's ASSURED criteria Examines how paper-based diagnostics could be integrated with other technologies, such as printed electronics, and the Internet of Things. Outlines how semi-skilled personnel across a variety of fields can implement paper-based diagnostics

The Paper Solution Dec 16 2021 From the "Marie Kondo of paper" comes a simple and accessible guide to paper management. Americans are drowning in paper. We keep stacks of it on the kitchen counter, stash it in drawers, and store file cabinets full of documents that we never even look at. Studies show that fully 85 percent of the paper in our lives can be tossed--but which 85 percent? And how do we organize and manage the 15 percent that remains? With *The Paper Solution*, founder of Organize365 Lisa Woodruff delivers a proven, step-by-step guide for what to shred, what to save, and how to sort what's left behind. With her method, you'll learn: • What documents you must absolutely hold on to • Which papers you can dispose of today • How to ditch your bulky filing cabinets and make your vital documents accessible and portable And at the heart of it all is the Sunday Basket: a box that sits on your counter and corrals those stray bills, forms, coupons, and scraps into an easy-to-use paper-management system. The Sunday Basket will become your new weekly habit--one that leads to less paper, less stress, and more time to spend on the things (and people) that matter most.

Tax Reforms in EU Member States 2012 Jun 29 2020 "The report is prepared jointly by DG ECFIN and DG TAXUD of the European Commission. As the previous editions, the report analyses recent trends in tax revenues and tax reforms in EU Member States. A particular focus of this year's edition is the analysis of the EU VAT system and tax policy challenges faced by EU Member States. The report examines the economic and policy implications of the EU VAT system, of which it provides an overview of the history and possible future. It analyses welfare gains and economic benefits from simplifying VAT procedures and reviews options to reduce VAT fraud and evasion. Applying an indicator based approach, the report identifies horizontal challenges that EU Member States are currently facing in the area of tax policy. These relate to (i) fiscal consolidation on the revenue side and growth-friendly tax structures, (ii) broadness of tax bases in both direct and indirect taxation, with a particular focus on corporate tax expenditure, (iii) the need to improve tax governance and (iv) specific tax issues, namely housing taxation, environmental taxation and some redistributive aspects of taxation." -- EU Bookshop.

Impulsive Differential Inclusions Jul 11 2021 Differential equations with impulses arise as models of many evolving processes that are subject to abrupt changes, such as shocks, harvesting, and natural disasters. These phenomena involve short-term perturbations from continuous and smooth dynamics, whose duration is negligible in comparison with the duration of an entire evolution. In models involving such perturbations, it is natural to assume these perturbations act instantaneously or in the form of impulses. As a consequence, impulsive differential equations have been developed in modeling impulsive problems in physics, population dynamics, ecology, biotechnology, industrial robotics, pharmacokinetics, optimal control, and so forth. There are also many different studies in biology and medicine for which impulsive differential equations provide good models. During the last 10 years, the authors have been responsible for extensive contributions to the literature on impulsive differential inclusions via fixed point methods. This book is motivated by that research as the authors endeavor to bring under one cover much of those results along with results by other researchers either affecting or affected by the authors' work. The questions of existence and stability of solutions for different classes of initial value problems for impulsive differential equations and inclusions with fixed and variable moments are considered in detail. Attention is also given to boundary value problems. In addition, since differential equations can be viewed as special cases of differential inclusions, significant attention is also given to relative questions concerning differential equations. This monograph addresses a variety of side issues that arise from its simpler beginnings as well.

Economics of Land Degradation and Improvement – A Global Assessment for Sustainable Development Aug 20 2019 This volume deals with land degradation, which is occurring in almost all terrestrial biomes and agro-ecologies, in both low and high

income countries and is stretching to about 30% of the total global land area. About three billion people reside in these degraded lands. However, the impact of land degradation is especially severe on livelihoods of the poor who heavily depend on natural resources. The annual global cost of land degradation due to land use and cover change (LUCC) and lower cropland and rangeland productivity is estimated to be about 300 billion USD. Sub-Saharan Africa (SSA) accounts for the largest share (22%) of the total global cost of land degradation. Only about 38% of the cost of land degradation due to LUCC - which accounts for 78% of the US\$300 billion loss – is borne by land users and the remaining share (62%) is borne by consumers of ecosystem services off the farm. The results in this volume indicate that reversing land degradation trends makes both economic sense, and has multiple social and environmental benefits. On average, one US dollar investment into restoration of degraded land returns five US dollars. The findings of the country case studies call for increased investments into the rehabilitation and restoration of degraded lands, including through such institutional and policy measures as strengthening community participation for sustainable land management, enhancing government effectiveness and rule of law, improving access to markets and rural services, and securing land tenure. The assessment in this volume has been conducted at a time when there is an elevated interest in private land investments and when global efforts to achieve sustainable development objectives have intensified. In this regard, the results of this volume can contribute significantly to the ongoing policy debate and efforts to design strategies for achieving sustainable development goals and related efforts to address land degradation and halt biodiversity loss.

Drilling Engineering Problems and Solutions May 29 2020 Petroleum and natural gas still remain the single biggest resource for energy on earth. Even as alternative and renewable sources are developed, petroleum and natural gas continue to be, by far, the most used and, if engineered properly, the most cost-effective and efficient, source of energy on the planet. Drilling engineering is one of the most important links in the energy chain, being, after all, the science of getting the resources out of the ground for processing. Without drilling engineering, there would be no gasoline, jet fuel, and the myriad of other “have to have” products that people use all over the world every day. Following up on their previous books, also available from Wiley-Scrivener, the authors, two of the most well-respected, prolific, and progressive drilling engineers in the industry, offer this groundbreaking volume. They cover the basics tenets of drilling engineering, the most common problems that the drilling engineer faces day to day, and cutting-edge new technology and processes through their unique lens. Written to reflect the new, changing world that we live in, this fascinating new volume offers a treasure of knowledge for the veteran engineer, new hire, or student. This book is an excellent resource for petroleum engineering students, reservoir engineers, supervisors & managers, researchers and environmental engineers for planning every aspect of rig operations in the most sustainable, environmentally responsible manner, using the most up-to-date technological advancements in equipment and processes.
