**The Chateau** Jun 25 2019 I've been taking care of my little sister for a long time. When Mom was gone, she suddenly became my responsibility. The best years of my life were spent being a caretaker to someone else...with no one to take care of me. So I moved to Paris for my study-abroad program and ended up staying, getting a French Literature degree, studying the classics while sipping the best wine I'd ever had. My sister never makes the best decisions, always makes messes to clean up, and it's finally time for me to have my own life. But when she comes to Paris for a visit...she brings trouble with her. She gets herself into a bad situation, and of course, I come to her rescue...like I always do. Now we're in a labor camp in the middle of nowhere, surrounded by endless snow and mountains, processing drugs for a group of men that never show their faces. There's no chance of escape in this wilderness. Except for my guard. He's not a saint, but he's the only man that's kind to me. He knows I want to escape, but he never reports me. When I've had a hard day, he brings me extra things to make my life easier. He tells me not to run because I'll never make it...but he brings me little hidden tools...as if he's giving me the means. Like he wants me to be free.

**Crazy Over You** Oct 22 2021 She's on the sheriff's most wanted list. Waking up with a naked woman holding a knife at his throat is just about the last thing Sheriff Travis Flynn expected. And the brother she's looking for? A murderer. And dead. Probably. But the real shock comes when she insists she's not a Lycan. LeAnn Wilcox isn't looking for love...especially not from some wolf in sheriff's clothing. She operates on the other side of the law. Once she finds her brother-alive-she'll get out of the pack's territory and go back to her regular, normal, non-furry life of changing jobs and her name whenever her past closes in. The cool, logical Sheriff has finally met his match, but LeAnn's life is at stake if she won't claim her place in the pack, especially once his control over the pack is challenged and her brother's fate is questioned.

**Ice Forged** Jun 05 2020 From one of the most exciting writers of fantasy adventure comes the first novel in The Ascendant Kingdoms Saga, a tale of unpredictable magic, battling warlords, and the lust for vengeance set in the unforgiving frozen wastes at the edge of the world. Condemned as a murderer for killing the man who dishonored his sister, Blaine "Mick" McFadden has spent the last six years exiled in Velant, a penal colony in the frigid northern wastelands. Harsh military discipline and the oppressive magic keep a fragile peace as colonists struggle against a hostile environment. But the supply ships from Dondareth have stopped coming, boding ill for the kingdom that banished the colonists. Now, as the world's magic runs wild, McFadden and the people of Velant must fight to survive and decide their fate . . . Praise for the Ascendant Kingdoms Saga "Epic fantasy as it was meant to be read: gripping, action packed, and larger than life. A delight for any fan of the genre!" —Rachel Aaron "Epic fantasy at its best." —Aaron Rosenberg "A vivid, engrossing tapestry woven from epic heroism, post apocalypse struggles, perilous magic and darkest fantasy. A distinct and distinctive achievement." —Juliet McKenna "A book that will take over readers' thoughts until long after the final page." —RT Book Reviews The Ascendant Kingdoms Saga Ice Forged Reign of Ash War of Shadows Shadow and Flame

**Ice Song** Nov 10 2020 "Reminiscent of Ursula Le Guin's paradigm-shattering *The Left Hand of Darkness*, this piercingly moving story belongs in most fantasy collections."—Library Journal There are secrets beneath her skin. Sorykah Minuit is a scholar, an engineer, and the sole woman aboard an ice-drilling submarine in the frozen land of the Sigue. What no one knows is that she is also a Trader: one who can switch genders suddenly, a rare corporeal deviance universally met with fascination and superstition and all too often punished by harassment or death. Sorykah's infant twins, Leander and Ayeda, have inherited their mother's Trader genes. When a wealthy, reclusive madman known as the Collector abducts the babies to use in his dreadful experiments, Sorykah and her male alter-ego, Soryk, must cross icy wastes and a primeval forest to get them back. Complicating the dangerous journey is the fact that Sorykah and Soryk do not share memories: Each disorienting transformation is like awakening with a jolt from a deep and dreamless sleep. The world through which the alternating lives of Sorykah and Soryk travel is both familiar and surreal. Environmental degradation and genetic mutation run amok; humans have been distorted into animals and animal bodies cloak a wild humanity. But it is also a world of unexpected beauty and wonder, where kindness and love endure amid the ruins. Alluring, intense, and gorgeously rendered, *Ice Song* is a remarkable debut by a fiercely original new writer. Praise for *Ice Song* "A stunning debut fantasy about love and the ties of blood."—Armchair Interviews "Kasai's debut is a boldly adventurous tale depicting a richly detailed world. The aspect of Traders shifting gender brings Ursula K. LeGuin's *The Left Hand of Darkness* to mind, while the activities on Chen's island are more reminiscent of Laurell K. Hamilton's Meredith Gentry novels."—Booklist "Ice Song is definitely a compelling read, largely due to the fact that Sorykah is such a well-developed character. She has an equally intense and complex sense of love and resentment for her children. And the fact that she exists between the world of humans and the mutants is also a source of conflict for her character . . . *Ice Song* is a near-perfect combination of fantasy, great storytelling and social commentary."—Philadelphia Gay News

*Concepts from Tensor Analysis and Differential Geometry* Feb 11 2021 *Concepts from Tensor Analysis and Differential Geometry* discusses coordinate manifolds, scalars, vectors, and tensors. The book explains some interesting formal properties of a skew-symmetric tensor and the curl of a vector in a coordinate manifold of three dimensions. It also explains Riemann spaces, affinely connected spaces, normal coordinates, and the general theory of extension. The book explores differential invariants, transformation groups, Euclidean metric space, and the Frenet formulae. The text describes curves in space, surfaces in space, mixed surfaces, space tensors, including the formulae of Gauss and Weingarten. It presents the equations of two scalars K and Q which can be defined over a regular surface S in a three dimensional Riemannian space R. In the equation, the scalar K, which is an intrinsic differential invariant of the surface S, is known as the total or Gaussian curvature and the scalar U is the mean curvature of the surface. The book also tackles families of parallel surfaces, developable surfaces, asymptotic lines, and orthogonal ennuples. The text is intended for a one-semester course for graduate students of pure mathematics, of applied mathematics covering subjects such as the theory of relativity, fluid mechanics, elasticity, and plasticity theory.

Using the Cultural Assessment Framework (CAF), this proven handbook includes a focus on six specific populations (Hispanic/Latino, African American, American Indian and Alaska Native, Asian American, Pacific Islanders, and Arab Americans). The text concludes with a set of tips for working cross-culturally and a discussion about where the field is heading with respect to research and practice in the 21st century.

*The Dispensary* Apr 27 2022 A satire on the opponents of the dispensary organized by the Royal College of Physicians.

*Children* Sep 08 2020 Written by a collaborative team from schools of education and health care, this text advocates a multidisciplinary and child-centred approach to the study of, and provision for, childhood. As such, it will be an invaluable resource to the study of childhood for health care professionals (especially nurses and social workers), and also for student teachers. Undergraduates studying Childhood Studies and nurses following the Child Branch of Project 2000 courses will find this book essential reading. Much recent research and reflection on the experiences of children, families, and professionals ardently recommends this multi-agency commitment and this book will be the first to be written by a multi-professional team. The book looks at child development, images of childhood, children learning, measuring children, the family, children and violence and children at risk. Each chapter is written by a lead author from a particular professional discipline and co-authored by two contributing writers from different educational or professional backgrounds. As such, each chapter is truly inter-disciplinary and multi-professional in approach.

Milk Production and Processing May 29 2022 The book covers various aspects of dairying and milk products such as dairy farm establishment, management, production and utilisation of various dairy products. Information has been included on various aspects of dairy farming starting with selection and purchase of dairy cattle, their care and management, with respect to housing, feeding, breeding and health care during various physiological states such as growth, pregnancy and lactation and during different seasons. Details of health care management along with common diseases have been covered with all information required for educated farmers and technicians working in these areas. Various means for consistent improvement of the stock has also been included. Production of clean milk, its procurement, processing and distribution has been covered with more emphasis on common processing technologies such as pasteurisation and sterilisation. Different forms of liquid milk available in the market has been described along with its standards and other specifications for the knowledge of common man and technicians. Manufacturing methods of milk products have been included with appropriate flow chart wherever required and various categories of milk products have been covered in detail under different chapters under milk products. This book has been prepared with emphasis on second year syllabus of Vocational higher secondary course on milk products and dairying and considering the lack of a suitable textbook for this subject. Hence the book is expected to fill the gap of a textbook for the above said and similar courses. Also the book may be accepted as a textbook/manual for educated farmers, other teaching and training programmes covering similar syllabus like that of dairy farm instructors and as a handbook for Veterinary Students and Dairy Extension Officers. With these introductory notes, we presume that the book will satisfy its readers' requirements and form a valuable textbook/reference book for all those concerned with dairy animal production and utilisation of their products ultimately benefiting the farming community.

Ice Age Extinction Aug 08 2020 Global warming seen from the other side: by the end of the last ice age, the earth had lost most of its large animal species and most of its humans. In a

novel approach the author argues that the main cause of this catastrophic extinction was a drastic reduction in atmospheric carbon dioxide, due to the long period of cold, and he backs up his theory with scientific explanations given in clear language for the general reader. The author explores the causes of Earth's cyclical temperature changes and shows how those temperature shifts touch off a chain of events in the atmosphere, in the oceans and on land. Cold temperature was the trigger; and the resultant reduction in carbon dioxide, he argues, was the bullet that killed off so many species. The re-warming released more carbon dioxide into the atmosphere and fueled a resurgence which we are still enjoying. In addition, the author describes the human responses to increases in atmospheric carbon dioxide after the last ice age and in the last 150 years. Near the end of the last ice age, atmospheric carbon dioxide was about half of what it is today. Due to the lack of carbon dioxide, most of the vegetation disappeared from the middle and high latitudes. Without plants to eat, many large animals became extinct; North America lost three-fourths of its large animals including the woolly mammoth, mastodon, and saber tooth cat. Humans, too, had little to eat in these areas and their population declined dramatically. The book then explains how and why atmospheric carbon dioxide increased by about 50% after the last ice age ended, encouraging a population explosion among plants, animals and humans, all of which then migrated into many previously barren areas. More recently, the 28% increase in atmospheric carbon dioxide in the last 150 years has caused a six-fold increase in the human population. Changes in the next 300 years will reverse some of the current trends. There have been some books on the causes of extinction over the last forty years, but all looked at other causes and none examined the role of low atmospheric carbon dioxide. This book has value for anyone interested in the ice age extinction; glaciers; the glacial cycle; the atmosphere and oceans; the past and future of plants, animals, and humans. It provides long-term information on atmospheric carbon dioxide, global warming and cooling.
