The Man Who Tasted Words Feb 09 2021 In *The Man Who Tasted Words*, Guy Leschziner leads readers through the senses and how, through them, our brain understands or misunderstands the world around us. Vision, hearing, taste, smell, and touch are what we rely on to perceive the reality of our world. Our senses are the conduits that bring us the scent of a freshly brewed cup of coffee or the notes of a favorite song suddenly playing on the radio. But are they really that reliable? *The Man Who Tasted Words* shows that what we perceive to be absolute truths of the world around us is actually a complex internal reconstruction by our minds and nervous systems. The translation into experiences with conscious meaning—the pattern of light and dark on the retina that is transformed into the face of a loved one, for instance—is a process that is invisible, undetected by ourselves and, in most cases, completely out of our control. In *The Man Who Tasted Words*, neurologist Guy Leschziner explores how our nervous systems define our worlds and how we can, in fact, be victims of falsehoods perpetrated by our own brains. In his moving and lyrical chronicles of lives turned upside down by a disruption in one or more of their five senses, he introduces readers to extraordinary individuals, like one man who actually "tasted" words, and shows us how sensory disruptions like that have played havoc, not only with their view of the world, but with their relationships as well. The cases Leschziner shares in *The Man Who Tasted Words* are extreme, but they are also human, and teach us how our lives and what we perceive as reality are both ultimately defined by the complexities of our nervous systems.

[Losing Reality](#) Dec 27 2019 A definitive account of the psychology of zealotry, from a National Book Award winner and a leading authority on the nature of cults, political absolutism, and mind control. In this unique and timely volume Robert Jay Lifton, the National Book Award-winning psychiatrist, historian, and public intellectual proposes a radical idea: that the psychological relationship between extremist political movements and fanatical religious cults may be much closer than anyone thought. Exploring the most extreme manifestations of human zealotry, Lifton highlights an array of leaders—from Mao to Hitler to the Japanese apocalyptic cult leader Shōkō Asahara to Donald Trump—who have sought the control of human minds and the ownership of reality. Lifton has spent decades exploring psychological extremism. His pioneering concept of the "Eight Deadly Sins" of ideological totalitarianism—originally devised to identify "brainwashing" (or "thought reform") in political movements—has been widely quoted in writings about cults, and embraced by members and former members of religious cults seeking to understand their experiences. In *Losing Reality* Lifton makes clear that the apocalyptic impulse—that of destroying the world in order to remake it in purified form—is not limited to religious groups but is prominent in extremist political movements such as Nazism and Chinese Communism, and also in groups surrounding Donald Trump. Lifton applies his concept of "malignant normality" to Trump's efforts to render his destructive falsehoods a routine part of American life. But Lifton sees the human species as capable of "regaining reality" by means of our "protean" psychological capacities and our ethical and political commitments as "witnessing professionals." Lifton weaves together some of his finest work with extensive new commentary to provide vital understanding of our struggle with mental predators. *Losing Reality* is a book not only of stunning scholarship, but also of huge relevance for these troubled times.

Archaeologies of Touch Jun 13 2021 A material history of haptics technology that raises new questions about the relationship between touch and media. Since the rise of radio and television, we have lived in an era defined increasingly by the electronic circulation of images and sounds. But the flood of new computing technologies known as haptic interfaces—which use electricity, vibration, and force feedback to stimulate the sense of touch—offering an alternative way of mediating and experiencing reality. In *Archaeologies of Touch*, David Parisi offers the first full history of these increasingly vital technologies, showing how the efforts of scientists and engineers over the past three hundred years have gradually remade and redefined our sense of touch. Through lively analyses of electrical machines, videogames, sex toys, sensory substitution systems, robotics, and human-computer interfaces, Parisi shows how the materiality of touch technologies has been shaped by attempts to transform humans into more efficient processors of information. With haptics becoming ever more central to emerging virtual-reality platforms (immersive bodysuits loaded with touch-stimulating actuators), wearable computers (haptic messaging systems like the Apple Watch's Taptic Engine), and smartphones (vibrations that emulate the feel of buttons and onscreen objects), *Archaeologies of Touch* offers a timely and provocative engagement with the long history of touch technology that helps us confront and question the power relations underpinning the project of giving touch its own set of technical media.

[Understanding Psychosis and Schizophrenia](#) Jun 25 2022 This report provides an overview of the current state of knowledge about why some people hear voices, experience paranoia or have other experiences seen as 'psychosis'. It also describes what can help. In clinical language, the report concerns the 'causes and treatment of schizophrenia and other psychoses'. In recent years we have made huge progress in understanding the psychology of what had previously often been thought of as a largely biological problem, an illness. Much has been written about the biological aspects: this report aims to redress the balance by concentrating on the psychological and social aspects, both in terms of how we understand these experiences and also what can help when they become distressing. We hope that this report will contribute to a fundamental change that is already underway in how we as a society think about and offer help for 'psychosis' and 'schizophrenia'. For example, we hope that in future services will no longer insist that service users accept one particular view of their problem, namely the traditional view that they have an illness which needs to be treated primarily by medication. The report is intended as a resource for people who work in mental health services, people who use them and their friends and relatives, to help ensure that their conversations are as well informed and as useful as possible. It also contains vital information for those responsible for commissioning and designing both services and professional training, as well as for journalists and policy-makers. We hope that it will help to change the way that we as a society think about not only psychosis but also the other kinds of distress that are sometimes called mental illness. This report was written by a working party mainly comprised of clinical psychologists drawn from the NHS and universities, and brought together by their professional body, the British Psychological Society Division of Clinical Psychology. This report draws on and updates an earlier one, Recent Advances in Understanding Mental Illness and Psychotic Experiences, which was published in 2000 and was widely read and cited. The contributors are leading experts and researchers in the field; a full listing with affiliations is given at the end of the report. More than a quarter of the contributors are experts by experience - people who have themselves heard voices, experienced paranoia or received diagnoses such as psychosis or schizophrenia. At the end of the report there is an extensive list of websites, books and other resources that readers might find useful, together with list of the academic research and other literature that the report draws on.

[Virtual Reality Designs](#) Nov 18 2021 Virtual Reality is not real life. Instead it is life-like creations using computer-generated scenarios. Human behavior is replicated in virtual scenarios, where every detail is controlled by computers, and in situations that can be repeated under the same conditions. Based on technology and design, the user can experience presence. In the virtual world, users are embodied in avatars that represent them and are the means to interact with the virtual environment. Avatars are graphical models that behave on behalf of the human behind them. The user avatar is a proxy that also backs interaction with others, allowing computer-mediated interactions. Analyses directed to understand people's perceptions, personal and social behavior in computer mediated interactions, comprise a multidisciplinary area of study that involves, among others, computer science, psychology and sociology. In the last two decades a number of studies supported by Virtual Reality have been conducted to understand human behavior, in some cases the implications of the technology, or to reproduce artificial human behavior. This book presents a collection of studies from recognized researchers in the area.

[Reality Media](#) Jan 08 2021 How augmented reality and virtual reality are taking their places in contemporary media culture alongside film and television. T This book positions augmented reality (AR) and virtual reality (VR) firmly in contemporary media culture. The authors view AR and VR not as the latest hyped technologies but as media—the latest in a series of what they term “reality media,” taking their places alongside film and television. Reality media inserts a layer of media between us and our perception of the world; AR and VR do not replace reality but refashion a reality for us. Each reality medium mediates and remediates; each offers a new representation that we implicitly compare to our experience of the world in itself but also through other media. The authors show that as forms of reality media emerge, they not only chart a future path for media culture, but also redefine media past. With AR and VR in mind, then, we can recognize their precursors in eighteenth-century panoramas and the Broadway lights of the 1930s. A digital version of Reality Media, available through the book's website, invites readers to visit a series of virtual rooms featuring interactivity, 3-D models, videos, images, and texts that explore the themes of the book.

[The Exegesis of Philip K Dick](#) Feb 21 2022 Based on thousands of pages of typed and handwritten notes, journal entries, letters, and story sketches, The Exegesis of Philip K. Dick is the magnificent and imaginative final work of an author who dedicated his life to questioning the nature of reality and perception, the malleability of space and time, and the relationship between the human and the divine. Edited and introduced by Pamela Jackson and Jonathan Lethem, this will be the definitive presentation of Dick's brilliant, and epic, final work. In The Exegesis, Dick documents his eight-year attempt to fathom what he called "2-3-74", a postmodern visionary experience of the entire universe "transformed into information". In entries that sometimes ran to hundreds of pages, Dick tried to write his way into the heart of a cosmic mystery that tested his powers of imagination and invention to

the limit, adding to, revising, and discarding theory after theory, mixing in dreams and visionary experiences as they occurred, and pulling it all together in three late novels known as the VALIS trilogy. In this abridgment, Jackson and Lethem serve as guides, taking the reader through the Exegesis and establishing connections with moments in Dick's life and work.

Global Insanity May 24 2022 The Global Economy that sustains the civilized world is destroying the biosphere. As a result, civilization, like the Titanic, is on a collision course with disaster. But changing course via the body politic appears to be well nigh impossible, given that much of the populace lives in denial. Why is that? And how did we get into such a fix? In this essay, biologists James Coffman and Donald Mikulecky argue that the reductionist model of the world developed by Western civilization misrepresents life, undermining our ability to regulate and adapt to the accelerating anthropogenic transformation of the world entrained by that very model. An alternative worldview is presented that better accounts for both the relational nature of living systems and the developmental phenomenology that constrains their evolution. Development of any complex system reinforces specific dependencies while eliminating alternatives, reducing the diversity that affords adaptive degrees of freedom: the more developed a system is, the less potential it has to change its way of being. Hence, in the evolution of life most species become extinct. This perspective reveals the limits that complexity places on knowledge and technology, bringing to light our hubristically dysfunctional relationship with the natural world and increasingly tenuous connection to reality. The inescapable conclusion is that, barring a cultural metamorphosis that breaks free of deeply entrenched mental frames that made us what we are, continued development of the Global Economy will lead inexorably to the collapse of civilization.

It explores the dulling effect of habit on tactile contact with the body. A disharmonized cognitive function which keeps the mind preoccupied is analyzed. Embodiment or an incarnate state is studied as an alternative avenue to the act of perception. The body itself as an organ of perception provides the keynote of the examination.
