U.S. and International Sales, Lease, and Licensing Law Oct 17 2021 In a logical and persuasive manner, this class-tested casebook first provides background information about UCC Article 2 and the CISG, then addresses key issues in the order in which a lawyer is likely to encounter them in practice: Which law is applicable? Has a contract been formed? What are the terms of the contract? Has the contract been performed? If not, what are the available remedies for the injured party? Finally, the text concludes by considering third parties involved in the sales transactions and the law governing their obligations. Many problems refer students to international collections found on the Internet, and the text provides references to both unrevised and revised UCC Article 1. The Second Edition has been updated to reflect the newer version of the INCOTERMS (INCOTERMS 2010), and the Uniform Customs and Practice for Documentary Credits (UCP 600). Discussion of UCC Article 2 has been revised as a result of the Uniform Law Commission and American Law Institute dropping the proposed amendments. Features: Provides background information about UCC Article 2 and the CISG Addresses key issues in the order encountered in practice Which law is applicable? Has a contract been formed? What are the terms of the contract? Has the contract been performed? If not, what are the available remedies for the injured party? Covers third parties involved and the law governing their obligations Combines cases and problems for teaching flexibility a case analysis structure a problems approach a combination of the two. Provides explanatory material to teach basic principles before cases and problems introduced Presents contemporary, carefully edited cases Includes such cases as Hill v. Gateway (contract formation), Medical Marketing International v. Internazionale Medico Scientifica (warranties under the CISG and confirmation of an arbitral award), MCC-Marble Ceramic Center v. Ceramica Nuova D'Agostino (parol evidence and the CISG), Zabriskie Chevrolet v. Smith (contract performance under the UCC), Delchi Carrier SpA v. Rotorex Corp. (remedies under the CISG), Chatlos Systems v. National Cash Register (calculation of damages under the UCC), Robinson Helicopter Company v. Dana Corporation (availability of tort remedies), and Specht v. Netscape Communications Corp. (contract formation in licensing transaction over the Internet). Many problems refer to international collections on the Internet Provides references to both unrevised and revised UCC Article 1

Intelligent Systems Aug 23 2019 The Industrial Electronics Handbook, Second Edition combines traditional and newer, more specialized knowledge that will help industrial electronics engineers develop practical solutions for the design and implementation of high-power applications. Embracing the broad technological scope of the field, this collection explores fundamental areas, including analog and digital circuits, electronics, electromagnetic machines, signal processing, and industrial control and communications systems. It also facilitates the use of intelligent systems—such as neural networks, fuzzy systems, and evolutionary methods—in terms of a hierarchical structure that makes factory control and supervision more efficient by addressing the needs of all production components. Enhancing its value, this fully updated collection presents research and global trends as published in the IEEE Transactions on Industrial Electronics Journal, one of the largest and most respected publications in the field. As intelligent systems continue to replace and sometimes outperform human intelligence in decision-making processes, they have made substantial contributions to the solution of very complex problems. As a result, the field of computational intelligence has branched out in several directions. For instance, artificial neural networks can learn how to classify patterns, such as images or sequences of events, and effectively model complex nonlinear systems. Simple and easy to implement, fuzzy systems can be applied to successful modeling and system control. Illustrating how these and other tools help engineers model nonlinear system behavior, determine and evaluate system parameters, and ensure overall system control, Intelligent Systems: Addresses various aspects of neural networks and fuzzy systems Focuses on system optimization, covering new techniques such as evolutionary methods, swarm, and ant colony optimizations Discusses several applications that deal with methods of computational
