Engagement in Teaching History Jun 25 2019 How can history be taught effectively? Does knowing about the past give meaning to the present and hints to what will happen in the future? This book responds to these questions as it explores the key elements of history instruction—the use of primary sources and narratives, involving students in the historical inquiry through classroom discussions, teaching toward chronological thinking, and the use of historical documents to develop in students a “detective approach” to solving historical problems. Taking a systematic approach to improve students' historical thinking, this book emphasizes certain strategies that will help students know more about the past in ways that will help them in their lives today. The second edition is organized in three parts—Part One describes the theoretical background to teaching history. Part Two, Planning and Assessment, emphasizes the importance of good organization and lesson planning as well as how to assess students' knowledge, reasoning power, and effective use of communication in the history classroom. Part Three, Instruction, focuses on the use of primary sources, class discussions, incorporating photographs and paintings, and writing in teaching history. Both the study of history and the teaching of history are multifaceted. The author's hope in writing this book is to engage new and experienced teachers in thoughtful discourse regarding the teaching and learning of history and to develop lifelong learners of history in the 21st century.

Writing without Teachers Oct 22 2021 In Writing Without Teachers, well-known advocate of innovative teaching methods Peter Elbow outlines a practical program for learning how to write. His approach is especially helpful to people who get "stuck" or blocked in their writing, and is equally useful for writing fiction, poetry, and essays, as well as reports, lectures, and memos. The core of Elbow's thinking is a challenge against traditional writing methods. Instead of editing and outlining material in the initial steps of the writing process, Elbow celebrates non-stop or free uncensored writing, without editorial checkpoints first, followed much later by the editorial process. This approach turns the focus towards encouraging ways of developing confidence and inspiration through free writing, multiple drafts, diaries, and notes. Elbow guides the reader through his metaphor of writing as "cooking:" his term for heating up the creative process where the subconscious bubbles up to the surface and the writing gets good. 1998 marks the twenty-fifth anniversary of Writing Without Teachers. In this edition, Elbow reexamines his program and the subsequent influence his techniques have had on writers, students, and teachers. This invaluable guide will benefit anyone, whether in the classroom, boardroom, or living room, who has ever had trouble writing.

The Child at School Jun 29 2022 What is the nature of children's social life in school? How do their relationships and interactions with peers, teachers and other school staff influence their development and experience of school? This book, written by leading researchers in educational and developmental psychology, provides answers to these questions by offering an integrated perspective on children's social interactions and relationships with their peers and teachers in school. Peer interactions in school have tended to be underestimated by educationalists, and this book redresses the balance by giving them equal weight to teacher-child interactions. In this second edition, the authors extensively revise the text on the basis of many years of research and teaching experience. They highlight common misconceptions about children, their social lives, and school achievement which have often resulted in ineffective school policy. The book includes a number of important topics, including: The significance of peer-friendships at school The nature and importance of play and break-times Aggression and bullying at school Peer relations and learning at school The classroom environment and teacher-pupil interaction The influence of gender in how children learn at school. Advantages and disadvantages of different methodological approaches for studying children in school settings Policy implications of current research findings. Improving Student Learning One Teacher at a Time Aug 08 2020 In this second edition of *Improving Student Learning One Teacher at a Time*, Jane E. Pollock and Laura J. Tolone combine updated research and real-world stories to demonstrate how it takes only one teacher to make a difference in student performance. Their approach expands the classic three-part curriculum-instruction-assessment framework by adding one key ingredient: feedback. This "Big Four" approach offers an easy-to-follow process that helps teachers build better curriculum documents with * Curriculum standards that are clear and well-paced, and describe what students will learn. * Instruction based in research, from daily lessons to whole units of study. * Assessment that maximizes feedback and requires critical and creative thinking. * Feedback that tracks and reports individual student progress by standards. Pollock and Tolone demonstrate how consistent, timely feedback from multiple sources can help students monitor their own understanding and help teachers align assignments, quizzes, and tests more explicitly to the standards. The Big Four shifts the focus away from the basics of what makes a good teacher toward what makes good learning happen for every student every day.

Small Teaching Aug 20 2021 Employ cognitive theory in the classroom every day Research into how we learn has opened the door for utilizing cognitive theory to facilitate better student learning. But that's easier said than done. Many books about cognitive theory introduce radical but impractical theories, failing to make the connection to the classroom. In *Small Teaching*, James Lang presents a strategy for improving student learning with a series of modest but powerful changes that make a big difference—many of which can be put into practice in a single class period. These strategies are designed to bridge the chasm between primary research and the classroom environment in a way that can be implemented by any faculty in any discipline, and even integrated into pre-existing teaching techniques. Learn, for example: How does one become good at retrieving knowledge from memory? How does making predictions now help us learn in the future? How do instructors instill fixed or growth mindsets in their students? Each chapter introduces a basic concept in cognitive theory, explains when and how it should be employed, and provides firm examples of how the intervention has been or could

be used in a variety of disciplines. Small teaching techniques include brief classroom or online learning activities, one-time interventions, and small modifications in course design or communication with students.
