Palm Latitudes Jun 25 2019 Written nearly a decade after *Lithium for Medea*, *Palm Latitudes*, Kate Braverman's second novel and arguably her chef d'oeuvre, explores the intertwined lives of three women who await absolution and revelation in the bougainvillea- and violence-filled "barrio" of Los Angeles. Frances Ramos is a voluptuous prostitute who flaunts her wealth and is held in high esteem by the local street gangs. Gloria Hernandez is a dutiful young wife and mother—until her husband's act of betrayal sparks her growing estrangement and fury. Marta Ortega, a prophetic old woman connected viscerally with the forces/elements of nature, nods as past and present mingle and quietly charts the cross-pollination of her turbulent neighborhood, and of human destiny.

In the Palm of God's Hand Sep 28 2019 A moving personal testimony with flashes of wry humour, Wendy Bray describes how she endured a second, unrelated breast cancer, following gruelling treatment for Hodgkin's lymphoma.

An Aramaic Approach to the Gospels and Acts, 3rd Edition Nov 30 2019 Since the second edition of this book appeared in 1954, two major discoveries in the field of Aramaic studies—the Qumran texts and the Neofiti Targum—have been made available to scholars. These, along with some important publications on the subject, have made this third edition necessary. The book has been completely revised and reset and the supplementary notes of the second edition incorporated in the text; a new chapter has been added to take account of the implications of the new discoveries for previous views about the language of Jesus. Those parts of the book dealing with Acts have been revised and supplemented in the light of Dr. Max Wilcox's important book on the Semitisms of Acts; and an Appendix by Dr. Geza Vermes, Reader in Jewish Studies in Oxford, has been added containing fresh evidence for the use of the expression "son of man" in Palestinian Aramaic.

Introduction to MATLAB 6 for Engineers Jul 31 2022 This is a simple, concise, and useful book, explaining MATLAB for freshmen in engineering. MATLAB is presently a globally available standard computational tool for engineers and scientists. The terminology, syntax, and the use of the programming language are well defined and the organization of the material makes it easy to locate information and navigate through the textbook. This new text emphasizes that students do not need to write loops to solve many problems. The Matlab "find" command with its relational and logical operators can be used instead of loops in many cases. This was mentioned in Palm's previous MATLAB texts, but receives more emphasis in this MATLAB 6 edition, starting with Chapter 1, and re-emphasized in Chapter 4.

The Oil Palm May 05 2020 The oil palm is the world's most valuable oil crop. With palm oilproduction increasing by more than 50% in the last decade of thetwentieth century and set to double in the next twenty years, ithas never before been so important to understand the history, useand cultivation of this fascinating crop. There have been many new developments since the third edition of*The Oil Palm* in 1988, particularly in the fields of clonalpropagation, agronomy, breeding and molecular genetics. This newedition has been completely rewritten, and is the first book to record and explore these and many other developments. The book traces the origins and progress of the industry, anddescribes the basic science underlying the physiology, breeding andnutrition of the oil palm. It covers both cutting-edge research,and wider issues such as genetic modification of the crop, thepromise of clonal propagation, and the effects of palm oil on humanhealth. The practical problems of maximising yield of oil andkernels are discussed in relation to the present 'yield gap' andoil extraction rate decline in Malaysia. The oil palm is alsocompared to the soya bean and other oil crops, and the recenthistory of the price of oil palm products is considered in thelight of this. *The Oil Palm* makes an essential contribution to oil palmresearch and will be an indispensable reference and guide foragricultural students, researchers and all those working,worldwide, in the oil palm industry.

Landmark Architecture of Palm Beach Jun 17 2021 Palm Beach is a remarkably small town to be so famous; its population is only a little over 10,000. Nor is it an old town: the oldest extant building dates from about 1885, and the town itself was not incorporated until after 1900. What has granted Palm Beach its fame is the same combination of elements that made Bath famous in the 18th century: a very few clear-sighted men—they can be counted on the fingers of one hand, wealthy families attracted to what these men had to offer, and some remarkable architecture built when wealth and vision intermingled. This book records that architecture. The contents are strategically arranged, so that the visitor can drive or walk the area and see the buildings sequence of location. Within this compendium of photographs and descriptive text, you will find more than 150 Palm Beach buildings written and photographed by a resident active in historic preservation. The book does not attempt to evaluate, but rather to exhibit the richness and diversity of this extraordinary place. The work of famous architects is featured, notably that of Addison Mizner, Marion Wyeth, Maurice Fatio, Howard Major, John Volk and the designer Joseph Urban. Also covered are the famous Breakers Hotel, the Bath and Tennis Club, the Everglades Club, and the shops of Worth Avenue.

Separate MATLAB sections at the end of most chapters show how to use the most recent features of this standard engineering tool, in the context of solving vibration problems. The text introduces Simulink where solutions may be difficult to program in MATLAB, such as modeling Coulomb friction effects and simulating systems that contain non-linearities. Ample problems throughout the text provide opportunities to practice identifying, formulating, and solving vibration problems. KEY FEATURES Strong pedagogical approach, including chapter objectives and summaries Extensive worked examples illustrating applications Numerous realistic homework problems Up-to-date MATLAB coverage The first vibration textbook to cover Simulink Self-contained introduction to MATLAB in Appendix A Special section dealing with active vibration control in sports equipment Special sections devoted to obtaining parameter values from experimental data

Land Snakes of Medical Significance in Malaysia Oct 10 2020 The purpose of this book is to highlight the potentially dangerous species to humans, with a list of the main potentially medically significant snakes. It is important to note that if a species is not listed below, it does not necessarily mean that it does not exist in Malaysia nor that its bite cannot cause harmful effects in humans. In particular, the list of colubrid (non-front-fanged) snakes has been selective, to include only a number known to be of potential medical significance. It is also important to note that a poor surveillance of the pet trade and irresponsible importation of exotic snakes may introduce a medically significant species, which is not indigenous to Malaysia. This may add to the complexity of managing envenomings in this country.

Problems are randomized to prevent sharing of answers and may also have a "multi-step solution" which helps move the students' learning along if they experience difficulty.

System Dynamics Mar 27 2022 "System dynamics deals with mathematical modeling and analysis of devices and processes for the purpose of understanding their time-dependent behavior. While other subjects, such as Newtonian dynamics and electrical circuit theory, also deal with time-dependent behavior, system dynamics emphasizes methods for handling applications containing multiple types of components and processes such as electromechanical devices, electrohydraulic devices, and fluid-thermal processes. Because the goal of system dynamics is to understand the time-dependent behavior of a system of interconnected devices and processes as a whole, the modeling and analysis methods used in system dynamics must be properly selected to reveal how the connections between the system elements affect its overall behavior. Because systems of interconnected elements often require a control system to work properly, control system design is a major application area in system dynamics"--

The Haze Problem in Southeast Asia Jan 01 2020 Despite the efforts of Southeast Asian governments and of ASEAN, transboundary haze continues to be a major environmental problem in Southeast Asia. This book demonstrates that the issue is complex, and explains why efforts to solve the problem in purely political terms are ineffective, and likely to continue to be ineffective. The book shows how state-led, state-incentivised agribusiness development lies at the heart of the problem, leading to a large rise in palm oil production, with extensive clearing of forests, leading to deliberate or accidental fires and the resulting haze. Moreover, although the forest clearing is occurring in Indonesia, many of the companies involved are Malaysian and Singaporean; and, further, many of these companies have close relationships with the politicians and officials responsible for addressing the problem and who thereby have a conflict of interest. The author concludes by discussing the huge difficulties involved in overturning this system of 'patronage politics'.
