**Power-Aware Computer Systems** Feb 27 2020 Welcome to the proceedings of the Power-Aware Computer Systems (PACS 2004) workshop held in conjunction with the 37th Annual International Sym- sium on Microarchitecture (MICRO-37). The continued increase of power and energy dissipation in computer systems has resulted in higher cost, lower re- ability, and reduced battery life in portable systems. Consequently, power and energy have become ?rst-class constraints at all layers of modern computer s- tems. PACS 2004 is the fourth workshop in its series to explore techniques to reduce power and energy at all levels of computer systems and brings together academic and industry researchers. The papers in these proceedings span a wide spectrum of areas in pow- aware systems. We have grouped the papers into the following categories: (1) microarchitecture- and circuit-level techniques, (2) power-aware memory and interconnect systems, and (3) frequency- and voltage-scaling techniques. The ?rst paper in the microarchitecture group proposes banking and wri- back ?ltering to reduce register ?le power. The second paper in this group - timizes both delay and power of the issue queue by packing two instructions in each issue queue entry and by memorizing upper-order bits of the wake-up tag. The third paper proposes bit slicing the datapath to exploit narrow width operations, and the last paper proposes to migrate application threads from one core to another in a multi-core chip to address thermal problems.

*Introduction to Biomedical Engineering Technology, 4th Edition* May 24 2022 This updated fourth edition provides current information on devices and is divided into diagnostic and treatment sections. Devices are described with the theory of operation and relevant anatomical and physiological considerations. Aspects of BMET work including test equipment, standards, and information technology are also discussed. The text covers a wide variety of diagnostic and treatment devices currently used in hospitals that students will likely encounter in their career. Principles of operation and examples of use are provided. This book is unique in that it is written by an experienced biomed tech with 30 years' experience in hospitals rather than by engineers with little frontline experience. It is also unique in that it provides ancillary materials on the web and is the only guide divided into diagnostic and treatment device sections. This new edition also includes two new chapters on computers, information technology, and networking as well as health technology management. From the previous edition: "The book presents a comfortable balance between clinical applications, basic technical information, and various pictures of medical technologies one will encounter in the field.
