Employment and Labour Market in North-East India Aug 22 2021 This book examines the structural changes in the labour market in North-East India. Going beyond the conventional study of tea and agricultural sectors, it focuses on the nature, pattern and structure of work and employment in the region as well as documents emerging shifts in the labour force towards farm to non-farm dynamics. The chapters explore historical developments in employment patterns, labour market policies, issues of gender and social-religious dimensions, as well as point to growing forms of casual, informal and contractual labour across sectors. Through large-scale data and detailed case studies on unfree labour in plantations and those employed in crafts, handloom and the manufacturing industry, the book provides insights into labour and employment in the region. It also delves into the temporal and spatial dimensions of non-farm employment and its relationship with rural income distribution and labour mobility. By bringing interdisciplinary perspectives from scholars working on North-East India, this work fills a major gap in the political economy of the labour market in the region. The volume will be useful to scholars and researchers of development studies, North-East India studies, labour studies, economics, sociology and political science as well to those involved with governance and policymaking.

The SAGES Manual of Hernia Surgery Nov 24 2021 This edition of the SAGES Manual of Hernia Surgery aligns with the current version of the new SAGES University MASTERS Program Hernia Surgery pathway. This manual serves as a curriculum for participants in the MASTERS Program as well as a modern text on hernia surgery for all learners. Hernia surgery is one of the fastest developing fields in general surgery today. There have been rapid advancements in hernia techniques in recent years, making most prior texts on the subject obsolete. These advancements involve significant evolution in both the techniques and strategies for hernia repairs, as well as the tools used to achieve these means. This text thoroughly addresses the multiple component separation techniques and options for locations of mesh repairs. It also discusses the revolution of hernia repair being facilitated by robotic surgery, which allows increased access to minimally invasive techniques for surgeons and thus increased access to minimally invasive surgical repairs for patients. This manual will be a valuable resource for interested surgeons to understand the variety of potential approaches to individual hernias, and to individually tailor the care of the hernia patient.
