China to Chinatown Apr 03 2020 China to Chinatown tells the story of one of the most notable examples of the globalization of food: the spread of Chinese recipes, ingredients and cooking styles to the Western world. Beginning with the accounts of Marco Polo and Franciscan missionaries, J.A.G. Roberts describes how Westerners' first impressions of Chinese food were decidedly mixed, with many regarding Chinese eating habits as repugnant. Chinese food was brought back to the West merely as a curiosity. The Western encounter with a wider variety of Chinese cuisine dates from the first half of the 20th century, when Chinese food spread to the West with emigrant communities. The author shows how Chinese cooking has come to be regarded by some as among the world's most sophisticated cuisines, and yet is harshly criticized by others, for example on the grounds that its preparation involves cruelty to animals. Roberts discusses the extent to which Chinese food, as a facet of Chinese culture overseas, has remained differentiated, and questions whether its ethnic identity is dissolving. Written in a lively style, the book will appeal to food historians and specialists in Chinese culture, as well as to readers interested in Chinese cuisine.

Bioassays with Arthropods Oct 29 2019 Imagine a statistics book for bioassays written by a statistician. Next, imagine a statistics book for bioassays written for a layman. Bioassays with Arthropods, Third Edition offers the best of both worlds by translating the terse, precise language of the statistician into language used by the laboratory scientist. The book explains the statistical basis and analysis for each kind of quantal response bioassay in just the right amount of detail. The first two editions were a great reference for designing, conducting, and interpreting bioassays: this completely revised and updated third edition will also train the laboratory scientist to be an expert in estimation of dose response curves. New in the Third Edition: Introduces four new Windows and Apple-based computer programs (PoloJR, OptiDose,

PoloMixture and PoloMulti) for the analyses of binary and multiple response analyses, respectively Replaces out-of-date GLIM examples with R program samples Includes a new chapter, Population Toxicology, and takes a systems approach to bioassays Expands the coverage of invasive species and quarantine statistics Building on the foundation set by the much-cited first two editions, the authors clearly delineate applications and ideas that are exceptionally challenging for those not already familiar with their use. They lead you through the methods with such ease and organization, that you suddenly find yourself readily able to apply concepts that you never thought you would understand. To order the PoloSuite computer software described in Bioassays with Arthropods, Third Edition, use the order form found at www.leora-software.com or contact the LeOra Software Company at leorasoftware@gmail.com.
