The Sugarmaker's Companion Mar 10 2021 The Sugarmaker's Companion is the first guide of its kind addressing the small- and large-scale syrup producer seeking to make a profitable business from maple, birch, and walnut sap. This comprehensive work incorporates valuable information on ecological forest management, value-added products, and the most up-to-date techniques on sap collection and processing. It is, most importantly, a guide to an integrated sugaring operation, interconnected to the whole-farm system, woodland, and community. Farrell documents the untapped potential of American forests and shows how sugaring can turn a substantial profit for farmers while providing tremendous enjoyment and satisfaction. Michael Farrell, sugarmaker and director of the Uihlein Forest at Cornell University, offers information on setting up and maintaining a viable sugaring business by incorporating the wisdom of traditional sugarmaking with the value of modern technology (such as reverse-osmosis machines and vacuum tubing). He gives a balanced view of the industry while offering a realistic picture of how modern

technology can be beneficial, from both an economic and an environmental perspective. Within these pages, readers will find if syrup production is right for them (and on what scale), determine how to find trees for tapping, learn the essentials of sap collection, the art and science of sugarmaking, and how to build community through syrup production. There are many more unique aspects to this book that set it apart from anything else on the market, including: - A focus on maple as a local, sustainably produced and healthy alternative to corn syrup and other highly processed and artificial sweeteners; - The health benefits of sap and syrup in North America and throughout the world; - Attention to the questions of organic certification, sugarhouse registration, and the new international grading system; - Enhancing diversity in the sugarbush and interplanting understory crops for value-added products (ginseng, goldenseal, and mushrooms, specifically); - An economic analysis of utilizing maple trees for syrup or sawtimber production and the market opportunities for taphole maple lumber; - The value of sap as a healthful and profitable energy drink; - Detailed analyses on the economics of buying and selling sap; - Lots of great information on marketing to create a profitable business model (based on scale, interest, and access), and more. . . . Applicable for a wide range of climates and regions, this book is sure to change the conversation around syrup production and prove invaluable for both home-scale and commercial

sugarmakers alike.

Agroforestry in Europe Dec 27 2019 Agroforestry has come of age during the past three decades. The age-old practice of growing trees and crops and sometimes animals in interacting combinations – that has been ignored in the single-commodity-oriented agricultural and forestry development paradigms – has been brought into the realm of modern land-use. Today agroforestry is well on its way to becoming a specialized science at a level similar to those of crop science and forestry science. To most land-use experts, however, agroforestry has a tropical connotation. They consider agroforestry as something that can and can only be identified with the tropics. That is a wrong perception. While it is true that the tropics, compared to the temperate regions, have a wider array of agroforestry systems and hold greater promise for potential agroforestry interventions, it is also true that agroforestry has several opportunities in the temperate regions too. Indeed, the role of agroforestry is now recognized in Europe as exemplified by this book, North America, and elsewhere in the temperate zone. Current interest in ecosystem management in industrialized countries strongly suggests that there is a need to embrace and apply agroforestry principles to help mitigate the environmental problems caused or exacerbated by commercial agricultural and forestry production enterprises.
